Education and Labor, 1972 *Algebraic Methods in Nonlinear Perturbation Theory* V.N. Bogachevski, A. Povzner, 2012-12-06 Many books have already been written about the perturbation theory of differential equations with a small parameter Therefore we would like to give some reasons why the reader should bother with still another book on this topic Speaking for the present only about ordinary differential equations and their applications

we notice that methods of solutions are so numerous and diverse that this part of applied mathematics appears as an aggregate of poorly connected methods. The majority of these methods require some previous guessing of a structure of the desired asymptotics. The Poincaré method of normal forms and the Bogolyubov-Krylov-Mitropolsky averaging methods well known in the literature should be mentioned specifically in connection with what will follow. These methods do not assume an immediate search for solutions in some special form but make use of changes of variables close to the identity transformation which bring the initial system to a certain normal form. Applicability of these methods is restricted by special forms of the initial systems.

Introduction to Linear Algebra, 2nd edition T.A. Whitelaw, 1991-04-01 This popular textbook was thoughtfully and specifically tailored to introducing undergraduate students to linear algebra. The second edition has been carefully revised to improve upon its already successful format and approach. In particular the author added a chapter on quadratic forms making this one of the most comprehensive introductory texts on linear algebra.

Commutative Algebra: Constructive Methods Henri Lombardi, Claude Quitté, 2015-07-22 Translated from the popular French edition this book offers a detailed introduction to various basic concepts, methods, principles and results of commutative algebra. It takes a constructive viewpoint in commutative algebra and studies algorithmic approaches alongside several abstract classical theories. Indeed it revisits these traditional topics with a new and simplifying manner making the subject both accessible and innovative. The algorithmic aspects of such naturally abstract topics as Galois theory, Dedekind rings, Prüfer rings, finitely generated projective modules, dimension theory of commutative rings and others in the current treatise are all analysed in the spirit of the great developers of constructive algebra in the nineteenth century. This updated and revised edition contains over 350 well arranged exercises together with their helpful hints for solution. A basic knowledge of linear algebra, group theory, elementary number theory as well as the fundamentals of ring and module theory is required. Commutative Algebra Constructive Methods will be useful for graduate students and also researchers, instructors and theoretical computer scientists.
