Material World Kevin Morrison, 2008-12-08 At a time when the world is grappling with rising food and energy prices and climate change Living in a Material World provides an insight into some of the contributing factors behind these challenges The emergence of new consumers in China India Russia and the Middle East has added formidable competition to the natural resources that have been taken for granted in the developed world Everything we consume involves the use of metals fossil fuels or agriculture Our high tech lifestyles depend on the secure supply of these raw materials which we take from planet earth and use to make our lives more comfortable more productive or more manageable The effect of this increasing global demand for commodities has pushed up prices of materials from oil and copper to corn and wheat forcing consumers to pay more for the many necessities of life from a loaf of bread to electricity bills Since the commodity boom has unfolded commodities have gone from the back page of the newspaper to the front with more and more headlines about record food and oil prices dire climate change warnings energy security and China's demand for more raw materials This era of high oil and food prices is no passing phase The supply of many key natural resources is stretched to the limit But what is the real cost Living in a Material World makes the link between raw materials and the consumer and shows how they are relevant to everybody everyday now more so than at any time since the last oil shock nearly three decades ago A unique insight into this once in a generation boom the book shows how the increasing value of commodities is impacting on consumers and investors in ways we are only just beginning to understand It was a great pleasure to read this book which provides an essential background to understanding commodities for anybody interested in understanding them more closely It is so rare to see all the essential elements brought together in one book Chris Brodie Krom River Partners LLP Kevin Morrison set out to write a book about the daily relevance that raw materials have for the ordinary consumer He has achieved his objective par excellence The subject matter has been comprehensively researched and well documented yet the writer has avoided using complicated technical language The style of the book is more in tune with a novel and the main topics are treated with a special sense of humour I would readily recommend this work to anyone interested in how global energy issues have a direct affect on us all Mehdi Varzi President Varzi Energy London *Putnam's Home Cyclopedia ...* G.P. Fuel Economy Guide, 2005 The Fordowner, 1917 **Almanac**, 1933 **Post-Oil Energy Technology** Bela G. Liptak, 2018-10-08 A solution to the climate and energy crisis The reversible fuel cell RFC described in this volume stores solar energy and thereby makes it continuously available This can make the building of energy free homes and all electric transportation a reality The foldout drawing at the back of this book also describes the detailed design of the world's first 1 000 megawatt solar hydrogen power plant How is this possible Our planet receives more solar energy in an hour than humans use in a year In fact 5% of the Sahara could meet the total energy requirement of mankind This energy can then be stored and transported in the form of hydrogen Converting from an exhaustible energy economy to a clean free and inexhaustible one In this timely book author Bela Liptak explains why a solar hydrogen economy is technically feasible and

cost effective He first outlines existing conservation technologies and renewable energy processes as well as evolving technologies such as energy free homes roof shingle solar collectors and RFCs He goes on to discuss energy optimization techniques that could reduce the global energy consumption by one third and finally presents the detailed design of a full size solar hydrogen power plant It is time to harness the power of solar energy With global energy consumption quadrupling in the last fifty years and atmospheric carbon dioxide reaching the highest level ever recorded now is the time to prevent further damage to the planet and ensure the survival of human civilization It is debatable how much time we have before our fossil and uranium deposits are exhausted It is also debatable how much climate change we can live with or how much of our economic resources should be devoted to stabilizing and reversing mankind s growing carbon footprint What is not debatable is that our resources are exhaustible and that we must not give reason for our grandchildren to ask Why did you not act in time
