With the emergence of terrestrial scanners, drones, robotics and artificial intelligence (AI), the acquisition of data has recently reshaped the landscape of the survey industry, highlighting the importance of protecting the intellectual rights of surveyors. This book investigates the distinct approaches taken by each jurisdiction in protecting copyrights in spatial data and explores commonalities and disparities between these jurisdictions, highlighting best practices. Functionality, Information Works, and Copyright Dana Beldiman, 2008 It has become the practice to claim copyright protection for virtually every piece of writing or its electronic equivalent created by knowledge professionals, from business plans for a start-up company to the instruction manual for use of a motorized saw and to specifications for pipeline tenders. This paper posits that the legal doctrine of copyright was never intended and is not equipped to regulate the very building block of our society: information. When used to protect utilitarian information products, UIW en masse, copyright can impede the flow of information necessary for innovation, foster waste in the form of redundant creation and adversely impact competition in the market. *Test Tubes for Global Intellectual Property Issues* Susy
