XII Mediterranean Conference on Medical and Biological Engineering and Computing 2010 Nicolas Pallikarakis, Panagiotis D. Bamidis, 2010-05-28 Over the past three decades the exploding number of new technologies and applications introduced in medical practice often powered by advances in biosignal processing and biomedical imaging created an amazing account of new possibilities for diagnosis and therapy but also raised major questions of appropriateness and safety The accelerated development in this field alongside with the promotion of electronic health care solutions is often on the basis of an uncontrolled diffusion and use of medical technology The emergence and use of medical devices is multiplied rapidly and today there exist more than one million different products available on the world market Despite the fact that the rising cost of health care partly resulting from the new emerging technological applications forms the most serious and urgent problem for many governments today another important concern is that of patient safety and user protection issues that should never be compromised and expelled from the Biomedical Engineering research practice agenda

An Adaptive Region Growing based on Neutrosophic Set in Ultrasound Domain for Image Segmentation XUE JIANG,YANHUI GUO,HAIBIN CHEN,YAQIN ZHANG , YAO LU, Breast tumor segmentation in ultrasound is important for breast ultrasound BUS quantitative analysis and clinical diagnosis Even this topic has been studied for a long time it is still a challenging task to segment tumor in BUS accurately arising from difficulties of speckle noise and tissue background inconsistency To overcome these difficulties we formulate breast tumor segmentation as a classification problem in the neutrosophic set NS domain which has been previously studied for removing speckle noise and enhancing contrast in BUS images The similarity set score and homogeneity value for each pixel have been calculated in the NS domain to characterize each pixel of BUS image Based on that the seed regions are selected by an adaptive Otsu based thresholding method and morphology operations then an adaptive region growing approach is developed for obtaining candidate tumor regions in NS domain
