Van Der Geest, Yucheng Chen, Peng Hu, Ming Yen Ng, 2024-08-28 In the past decades advanced quantitative indexes obtained by cardiovascular magnetic resonance imaging CMRI such as myocardial strain myocardial T1 ECV T2 T2 relaxation value myocardial blood flow quantification index and hemodynamics indexes have been proposed as an alternative for non invasive quantitative evaluation in various cardiovascular diseases Those quantitative indexes have been proven to be more sensitive in assessing the early change of myocardial tissue ventricular function or hemodynamics compared to the conventional qualitative methods However there are many challenges in the accurate measurement of those indexes as well as the evaluation of their clinical significance in the diagnosis and prognosis of a certain disease Besides quality control and standardization of those indexes become crucial when promoting them into clinical practice This Research Topic will offer comprehensive reviews and original research articles of the newly emerged quantitative CMRI methods and the clinical insights of the diagnostic and prognostic value of those advanced CMRI indexes CMRI techniques such as myocardial strain analysis quantitative myocardial tissue mapping 2 dimensional 4 dimensional flow quantification and quantitative perfusion will be of our interest The aim of this Research Topic will be to highlight the promising technical improvements in the accurate measurement of the CMRI indexes and or the added value of those indexes in disease diagnosis and prognosis Meanwhile quality control and standardization of the advanced CMRI indexes in multi centre multi vendor research projects will be discussed **Novel Methods to Advance Diagnostic and Treatment Value of Medical Imaging for Cardiovascular Disease** Zahra K. Trivella, Enrico Capobianco, Antonio L'Abbate, 2017-11-30 Physiology in extreme conditions can reveal important reactions of the human body which help our assessment of limits emerging under healthy conditions and critical signals of transition toward disease While many

mechanisms could simply be associated with adaptations others refer to unexpected reactions in response to internal stimuli and or external abrupt changes Advances in Medicine and Medical Research Mieczyslaw Pokorski,2019-03-06 This book focuses on issues in clinical practice and research that are of general interest The articles primarily focus on understanding the pathogenic mechanisms of diseases their prevention and therapy The topics addressed include cardiovascular regulation with regard to blood pressure and heart rate variability and to coupling blood pressure changes with subarachnoid fluid oscillations In addition the book discusses recent advances in the diagnostics of and targeted molecular therapy for renal and pancreatic malignancies growth disorders vitamin D and calcium homeostasis in children in the context of neonatal urolithiasis and neurosurgical interventions in multifarious age related diseases of the vertebrae Neuropsychological aspects of patients quality of life and of shaping medical staff s attitude toward patients are also addressed The respective articles are intended to build a bridge between basic and clinical research Further the book enhancesthe current body of knowledge on diagnostics and patient treatment and offers valuable new perspectives on practical clinical issues As such it offers a unique resource for clinicians family physicians medical scholars and professionals engaged in patient management
