Introduction to Analysis and Design of Equilibrium Staged Separation Processes Prof. Rajinder Pal, 2022-10-31 This book is written with second year chemical engineering undergraduate students in mind Chemical engineering undergraduate students are generally taught Equilibrium Stage Operations in their second year This is the first time they are introduced to equilibrium stage based separation processes The goal is to present the equilibrium stage concepts and operations in a manner comprehensible to second year chemical engineering students with little or no prior exposure to separation processes The book consists of sixteen chapters It covers single stage and multi stage absorption and stripping flash distillation multi stage column distillation batch distillation with and without reflux liquid liquid extraction and solid liquid leaching Although the book is focused on equilibrium staged separation processes the final chapter chapter 16 is devoted to the analysis and design of continuous contacting packed columns as packed columns are becoming increasingly important in practical applications Separations Chemistry Fedor Macášek, James D. Navratil, 2016-06-06 Separation of chemical species is a gate to final success of synthesis and preparation of compounds in pure and defined state Variability of natural and artificial mixtures to be treated is

enormous Task of chemistry is to separate components of homogeneous mixtures the gaseous and liquid solutions The book concentrates on understanding the basic philosophies of both equilibrium and nonequilibrium chemical thermodynamics and engineering performance that lay in principle of separation technique such as distillation crystallization centrifugation sorption membrane separations chromatography and liquid liquid extraction Specific phenomena connected with photochemical separation isotope composition and radioactivity are discussed as well The book is written for advanced students of chemistry having the knowledge of physical chemistry Calculation examples are based on the international system of units Unique list of over 1 300 full references covers scientific literature of the eighteenth to the twenty first centuries

Engineering Properties of Foods, Fourth Edition M.A. Rao, Syed S.H. Rizvi, Ashim K. Datta, Jasim Ahmed, 2014-04-22 It has been nearly a decade since the third edition of Engineering Properties of Foods was published and food structure microstructure remains a subject of research interest In fact significant developments have taken place in the area of high pressure processing HPP which has been approved for pasteurization of food by the Food and Drug Administration Kinetic data related to HPP have proven important for validation of pressure assisted pasteurization Due to these developments three new chapters have been added to the Fourth Edition Food Microstructure Analysis Glass Transition in Foods Kinetics and Process Design for High Pressure Processing The text focuses on elucidating the engineering aspects of food properties and their variations supplemented by representative data Chapters have been updated and revised to include recent developments The book presents data on physical chemical and biological properties illustrating their relevance and practical importance The topics range from surface properties rheological properties and thermal properties to thermodynamic dielectric and gas exchange properties The chapters follow a consistent format for ease of use Each chapter contains an introduction food property definition measurement procedure modeling representative data compilation and applications

Basic Equations of the Mass Transport Through a Membrane Layer Endre Nagy, 2012 With a detailed analysis of the mass transport through membrane layers and its effect on different separation processes this book provides a comprehensive look at the theoretical and practical aspects of membrane transport properties and functions Basic equations for every membrane are provided to predict the mass transfer rate the concentration distribution the convective velocity the separation efficiency and the effect of chemical or biochemical reaction taking into account the heterogeneity of the membrane layer to help better understand the mechanisms of the separation processes The reader will be able to describe membrane separation processes and the membrane reactors as well as choose the most suitable membrane structure for separation and for membrane reactor Containing detailed discussion of the latest results in transport processes and separation processes this book is essential for chemistry students and practitioners of chemical engineering and process engineering Detailed survey of the theoretical and practical aspects of every membrane process with specific equations Practical examples discussed in detail with clear steps Will assist in planning and preparation of more efficient membrane

structure separation *Cold Inflow-Free Solar Chimney* Md. Mizanur Rahman, Chi-Ming Chu, 2021-05-28 This book highlights the design of a new type of solar chimney that has lower height and bigger diameter and discusses its applications. The bigger diameter chimneys are introduced showing cold inflow phenomena that significantly reduced the performance of solar chimney. The cold inflow free operation of solar chimneys restores the draft losses and enhances the performance of the solar chimneys. Numerical and experimental investigation results will be presented to highlight the performance of cold inflow free solar chimney performance. In addition, this book covers the important basic design parameters that affect the design of solar chimney for different applications, mainly solar chimney assisted ventilation for passive cooling and power generation system.

Utilization of By-Products and Treatment of Waste in the Food Industry Vasso Oreopoulou, Winfried Russ, 2006-11-23 The single most important task of food scientists and the food industry as a whole is to ensure the safety of foods supplied to consumers. Recent trends in global food production distribution and preparation call for increased emphasis on hygienic practices at all levels and for increased research in food safety in order to ensure a safer global food supply. The ISEKI Food book series is a collection of volumes where various aspects of food safety and environmental issues are introduced and reviewed by scientists specializing in the field. In all of the books, a special emphasis was placed on including case studies applicable to each specific topic. The books are intended for graduate students and senior level undergraduate students as well as professionals and researchers interested in food safety and environmental issues applicable to food safety. The idea and planning of the books originates from two working groups in the European thematic network ISEKI Food. ISEKI Food is an acronym for Integrating Safety and Environmental Knowledge Into Food Studies. Participants in the ISEKI Food network come from 29 countries in Europe and most of the institutes and universities involved with food science education at the university level are represented. Some international companies and nonteaching institutions also have participated in the program. The ISEKI Food network is coordinated by Professor Cristina Silva at the Catholic University of Portugal, College of Biotechnology, Escola in Porto.

Separation Process Engineering Phillip C. Wankat, 2006-08-11 The Comprehensive Introduction to Standard and Advanced Separation for Every Chemical Engineer. Separation Process Engineering, Second Edition, helps readers thoroughly master both standard equilibrium staged separations and the latest new processes. The author explains key separation process with exceptional clarity, realistic examples, and end of chapter simulation exercises using Aspen Plus. The book starts by reviewing core concepts such as equilibrium and unit operations, then introduces a step by step process for solving separation problems. Next, it introduces each leading process, including advanced processes such as membrane separation, adsorption, and chromatography. For each process, the author presents essential principles, techniques, and equations, as well as detailed examples. Separation Process Engineering is the new thoroughly updated edition of the author's previous book, Equilibrium Staged Separations. Enhancements include improved organization, extensive new coverage, and more than 75% new homework problems, all tested in the author's Purdue University classes. Coverage includes

Detailed problems with real data organized in a common format for easier understanding Modular simulation exercises that support courses taught with simulators without creating confusion in courses that do not use them Extensive new coverage of membrane separations including gas permeation reverse osmosis ultrafiltration pervaporation and key applications A detailed introduction to adsorption chromatography and ion exchange everything students need to understand advanced work in these areas Discussions of standard equilibrium stage processes including flash distillation continuous column distillation batch distillation absorption stripping and extraction

Chitosan Based Materials and its Applications

Sergio Paulo Campana-Filho, Luiz Antonio de Almeida Pinto, 2017-06-07 This volume presents 10 reviews contributed by eminent researchers around the world on chitosan based materials The introductory chapters present information on general characteristics of chitosan and various types of materials which are based on it such as nanofibers nanoparticles nanocapsules and other chemically modified chitosans This is followed by an explanation of chitosan characterization and extraction techniques Concluding chapters describe the applications of chitosan products in water treatment drug delivery edible films and pervaporation membranes Readers will therefore gain an understanding about chitosan and materials derived from this polymer and their practical applications The volume serves as a simple reference for chemical engineering students and professionals interested in the basic and applied chemistry of chitosan and chitosan derived products
