

Bird Beak Lab

Background Information

The adaptation is a trait that helps an organism survive and reproduce. Beak shape and size is an example of an adaptation. As this lab goes, you will use three different adaptations and measure the bird's volume of capturing food. You will use materials such as clay, paper, straws, etc., and you will represent a type of bird beak. You will then use materials to pick up food as represented by beads/pills (seeds), peanuts (nuts), marshmallows (fruit) and beans (insects). The size represents the bird's stomach.

Procedure

Which bird type is best adapted or suited to obtain certain food?

BIRD - BEAKS

Observations

Which bird/beak is best suited for eating insects? _____

Which bird/beak is best suited for eating nuts? _____

Which bird/beak is best suited for eating fruit? _____

Which bird/beak is best suited for eating seeds? _____

Materials

Clay	Straws
Straws	Marbles
Plastic cups	Chips
Beans	Colored paper
Marshmallows	Thin paper
Beans	

Procedure

1. Choose a bird type from the list given to your group. Use the cup to represent the bird's stomach. Use the material appropriately.
2. When the signal is given, you will have 30 seconds to try to put as much food as possible into the bird's stomach. **STOP CATCHING!** (Times unless set in Canada. We agree to use metric measurements unless otherwise stated.)
3. Count and record the amount of food in the "stomach" for the bird type.
4. Calculate group averages.

Conclusions

1. What did variations in bird/beak types reflect variation of the birds? _____
2. What is this lab an example of variation by natural selection? _____

Identifying Adaptations In Birds Lab Key:

Physiological Adaptations for Breeding in Birds Tony D. Williams, 2012-08-05 Physiological Adaptations for Breeding in Birds is the most current and comprehensive account of research on avian reproduction. It develops two unique themes: the consideration of female avian reproductive physiology and ecology and an emphasis on individual variation in life history traits. Tony Williams investigates the physiological, metabolic, energetic, and hormonal mechanisms that underpin individual variation in the key female-specific reproductive traits and the trade-offs between these traits that determine variation in fitness. The core of the book deals with the avian reproductive cycle from seasonal gonadal development through egg laying and incubation to chick rearing. Reproduction is considered in the context of the annual cycle and through an individual's entire life history. The book focuses on timing of breeding, clutch size, egg size, and egg quality, and parental care. It also provides a primer on female reproductive physiology and considers trade-offs and carryover effects between reproduction and other life history stages. In each chapter, Williams describes individual variation in the trait of interest and the evolutionary context for trait variation. He argues that there is only a rudimentary and in some cases nonexistent understanding of the physiological mechanisms that underpin individual variation in the major reproductive life history traits and that research efforts should refocus on these key unresolved problems by incorporating detailed physiological studies into existing long-term population studies, generating a new synthesis of physiology, ecology, and evolutionary biology.

Characterizing Human Psychological Adaptations Gregory R. Bock, Gail Cardew, 2008-04-30 This book contains chapters by some of the leading figures in the field of evolutionary psychology. The latest data are presented on evolutionary theories in perception, information, various aspects of social behaviour, language, learning, and aggression. A common theme running through the printed discussions in this book is the important problem of how we can develop and test rigorous characterizations of evolved mental adaptations.

Adaptation and the Brain Susan D. Healy, 2021 What role has natural selection played in shaping the structure and function of the vertebrate brain? This accessible book unravels the myriad adaptive explanations that have built up over decades, providing both a review and a critique of the work that has sought to explain which natural selection pressures have led to changes in brain size.

Highly Mutable Animal RNA Viruses: Adaptation and Evolution Akio Adachi, Masako Nomaguchi, 2017-11-30 Viruses are widely present in nature, and numerous viral species with a variety of unique characteristics have been identified so far. Even now, new emerging or re-emerging viruses are being found or re-found as novel viral classes or as quasi-species. Indeed, viruses are everywhere. Of note, viruses are pivotal as targets and tools.

of basic and applied sciences On one hand portions of the viruses are infectious for animals including humans and cause various diseases in infected hosts by distinct mechanisms and at a different level of severity While many of viruses are known to co exist quietly with their hosts pathogenic viruses certainly affect and threaten our society as well as individuals to provoke serious medical or economic attention We should act against certain dreadful and highly infectious viruses as a global problem Animal RNA viruses can readily mutate to adapt themselves in their hostile environments for their survival Resultant viruses may sometimes show essentially altered phenotypes from the original parental strains This fundamental and general property of animal RNA viruses represents major extensive issues of scientific medical and or economic importance In this Research Topic we have focused on the high mutability of animal RNA viruses and selected relevant articles on animal viruses of broad ranges such as primate lentiviruses influenza viruses paramyxoviruses flaviviruses rabies virus norovirus picornaviruses and picobirnavirus Each article has taken up intriguing aspects of the subject viruses We are sure that readers acquire important information on virus mutation adaptation diversification and evolution and hope that researchers in the field related to virology gain some solid hints from the reported articles for further virological and or medical studies Finally we thank all the contributing researchers in this Research Topic entitled Highly Mutable Animal RNA Viruses Adaptation and Evolution for their elegant and interesting works

Flannelly,2017-04-08 This book provides a new perspective on the association between religious beliefs and mental health The book is divided into five parts the first of which traces the development of theories of organic evolution in the cultural and religious context before Charles Darwin Part II describes the major evolutionary theories that Darwin proposed in his three books on evolution and the religious sociological and scientific reactions to his theories Part III introduces the reader to the concept of evolutionary psychiatry It discusses how different regions of the brain evolved over time and explains that certain brain regions evolved to protect us from danger by assessing threats of harm in the environment including other humans Specifically this part describes how psychiatric symptoms that are commonly experienced by normal individuals during their everyday lives are the product of brain mechanisms that evolved to protect us from harm the prevalence rate of psychiatric symptoms in the U S general population how religious and other beliefs influence the brain mechanisms that underlie psychiatric symptoms and the brain regions that are involved in different psychiatric disorders Part IV presents the findings of U S studies demonstrating that positive beliefs about God and life after death and belief in meaning in life and divine forgiveness have salutary associations with mental health whereas negative beliefs about God and life after death belief in the Devil and human evil and doubts about one s religious beliefs have pernicious associations with mental health The last part of the book summarizes each section and recommends research on the brain mechanism underlying psychiatric symptoms and the relationships among these brain mechanisms religious beliefs and mental health in the context of ETAS Theory **Plant Adaptation** Quentin C.
