Informed Watermarking Joachim Eggers, Bernd Girod, 2012-12-06 This book deals with digital watermarking which is defined by the authors of this book as the art of hiding auxiliary information in digital data in a secure robust and imperceptible fashion Digital watermarking as a topic has a long history but before 1995 publications in scientific literature were almost absent From 1995 onwards however the number of publications on watermarking has been steadily increasing Today a number of workshops and conferences on this topic exist also a number of scientific journals on watermarking have been published This renewed scientific interest in digital watermarking has led very quickly to industrial interest as well In 1996 the Copy Protection Technical Working Group a voluntary consortium consisting of the movie industry the IT industry and the consumer electronics industry issued a call for watermarking technologies for the purpose of copy protection of DVD Video A few years later the Secure Digital Music Initiative issued a similar call in this case focusing on copy protection of digital music These two efforts have been only partially successful copy protection based on digital watermarking is not yet implemented on a large scale in any type of consumer device This current failure of watermarking to live up to its expectations finds its cause in a large number of reasons ranging from legal considerations and system aspects to the relative immaturity of watermarking as a technology

The Differentiated Countryside Philip Lowe, Terry Marsden and, Jonathan Murdoch, Neil Ward, 2005-07-08 In the wake of BSE the threat to ban fox hunting and Foot and Mouth disease the English countryside appears to be in turmoil Long standing uses of rural space are in crisis and unsurprisingly political processes in rural areas are marked by conflicts between groups such as farmers environmentalists developers and local residents Using an innovative theoretical approach based on networks of conventions this book investigates the regionalisation of the English countryside through a series of case studies These studies are based on a set of ideal types the preserved countryside where environmental pressures are strongly expressed the contested countryside where development processes are shaped by disputes between agrarian and environmental interests and the paternalistic countryside where large landowners continue to oversee patterns of land development It looks in detail at landowners residents politicians planners farmers and environmentalists and shows how these groups compete The Differentiated Countryside argues that the countryside is increasingly governed by regional policies It becomes hard to discern a single English countryside we see

the emergence of multiple countrysides places where diverse modes of identity are expressed and differing forms of development take place Such diversity it is argued now lies at the heart of rural England NEC Research & Development,2001

Interurban Road Charging for Trucks in Europe Jose Viegas,2005-01-19 Charging for the use of transport infrastructure has very different traditions in the various modes reflecting the different nature of their infrastructure nodal vs linear but also different historical traditions of open access system integration etc Since the early 90 s various European Commission initiatives took on this issue looking mainly at the road sector where many countries had no direct access charges Heavy goods vehicles were systematically identified as the primary targets for a renewed approach to this problem What seemed an easy catch has proved to be much harder with the

various countries adopting almost exclusively national approaches and the European institutions unable to drive the process This book looks at the challenges posed by this objective recognising that there are multiple objectives for application of road tolls and charges and discussing the various possible solutions in the technical institutional and legal dimensions The multiplicity of national situations in Europe is put in perspective the impacts of various charging schemes on regional development and on the environment are estimated and the recent policy process is analysed allowing a global view of the remaining difficulties and to make recommendations about the next steps in the process
