Calibration Handbook Jay L. Bucher, 2007-01-01 If a business expects to be a player in their market segment their product must have the quality expected by their customers This can only be accomplished with test equipment that produces repeatable accurate and traceable measurements and or outputs Without a quality calibration system in place this cannot and will not happen This book is about how to design implement maintain and continuously improve a quality calibration system with all the required documentation traceability and known uncertainty for each and every item of test equipment owned and used by any company large or small It will benefit companies that want to implement a program and also those

that already have one in place Some industries have tighter requirements than others on how they treat calibration some are more specific about how their standards are read while being vague about what is needed to meet calibration Is there one tried and true quality calibration system that every organization can use as a foundation for its personalized program There certainly is and The Quality Calibration Handbook describes it By using the quality calibration system outlined and demonstrated any organization can put together its own version to meet its specific requirements and or regulations Quality calibration systems are the very foundation for improving research and development R D production and quality assurance arenas through accurate reliable and traceable calibrations of their test equipment By ensuring the calibration of test equipment used in the production of genetic identity kits used by law enforcement at crime scenes the guilty are often caught and the innocent exonerated Calibrated test equipment used in support of the airline and automotive industries helps prevent disasters At pharmaceutical companies calibration technicians quietly lay the foundation for quality treatments that help keep us healthy cure diseases and sometimes prevent death This book explains why a quality calibration system can be the difference between life and death success and failure and most important to shareholders and boards of directors profit and loss
