

Operation Guide 5121

CASIO

Congratulations upon your selection of this CASIO watch.

This watch does not have a city code that corresponds to the UTC offset of +0.5 hours. Because of this, the radio-controlled atomic timekeeping function will not display the correct time for Newfoundland, Canada.

Note that CASIO COMPUTER CO., LTD. assumes no responsibility for any damage or loss suffered by you or any third party arising through the use of this product or its malfunction.

About This Manual

Button operations are indicated using the letters (A) through (F) shown in the illustration.

Hand Functions

- (1) Hour Hand
- (2) Second Hand
- (3) Minute Hand
- (4) Left Day Hand: Indicates the current day of the week and current mode.
- (5) Right Day Hand: Indicates the current 24-hour timekeeping hour.

(6) Day: This User's Guide uses numbers shown above to identify watch hands and indicators.

Things to check before using the watch

1. Hold down (A) at least two seconds to enter the Timekeeping Mode, and then observe the movement of the (2) Second Hand.

2. Check the Home City and the daylight saving time (DST) settings.

Use the procedure under "To configure Home City settings" to configure your Home City and daylight saving time settings.

Important

Proper time calibration signal reception and World Time settings depend on correct Home City, time, and date settings in the Timekeeping Mode. Make sure you configure these settings correctly.

3. Set the current time.

- To set the time using a time calibration signal: See "To get ready for a receive operation".
- To set the time manually: See "Configuring Current Time and Date Settings Manually".

The watch is now ready for use.

- For details about the watch's radio-controlled timekeeping feature, see "Radio-Controlled Atomic Timekeeping".

Charging the Watch

The face of the watch is a solar cell that generates power from light. The generated power charges a built-in rechargeable battery, which powers watch operations. The watch charges whenever it is exposed to light.

Charging Guide

- Whenever you are not wearing the watch, leave it in a location where it is exposed to light.
- Best charging performance is achieved by exposing the watch to light that is as strong as possible.

- When wearing the watch, make sure that its face is not blocked from light by the sleeve of your clothing.
- The watch may enter a sleep mode if its face is blocked by your sleeve even only partially.

Warning!

Leaving the watch in bright light for charging can cause it to become quite hot. Take care when handling the watch to avoid burns injury. The watch also becomes particularly hot when exposed to the following conditions for long periods.

- On the dashboard of a car parked in direct sunlight
- Too close to an incandescent lamp
- Under direct sunlight

Important

- Keep the watch in an area normally exposed to bright light when storing it for long periods. This helps to ensure that power does not run down.
- Storing the watch for long periods in an area where there is no light or wearing it in such a way that it is blocked from exposure to light can cause power to run down. Make sure that the watch is exposed to bright light whenever possible.

Power Levels

- You can get an idea of the watch's power level by observing the movement of the (2) Second Hand in the Timekeeping Mode.
- If the (2) Second Hand is moving normally at one-second intervals, power is at Level 1.
- If the (2) Second Hand is moving at two-second intervals, power is at Level 2, which is quite low. Expose the watch to light as soon as possible so it can charge.

Level	Hand Movement	Function Status
1	Normal	All functions enabled
2	(2) Second Hand: moving at two-second intervals (3) Minute Hand: changes to 6 change positions	Receiver, time calibration signal reception disabled
3	(2) Second Hand: stopped at 12 o'clock (3) Minute Hand: stopped at 12 o'clock	All functions disabled

- When power drops to Level 3, all functions will be disabled but the watch will continue to keep time internally for about one week. If you recharge the battery sufficiently during this period, the pending hands will move automatically to the correct setting and regular timekeeping will resume. After one week, all settings (including timekeeping) will be cleared. Recharging the battery will reset all settings to their initial factory defaults.

Power Recovery Mode

The watch is designed to go into a power recovery mode that stops hand operation temporarily whenever power suddenly drops below a certain level due to extreme of the alarm timer over a short period. Note that all operations are disabled while the watch is in the power recovery mode. The hands will move to the correct positions and the watch will resume normal operation after power recovers (in about 15 minutes). Putting the watch in a location where it is exposed to light will help power to recover faster.

Changing Times

Exposure Level (Brightness)	Only Operation = 1	Level Change = 2
Outdoor sunlight (50,000 lux)	3 minutes	Level 1 → Level 2 → Level 3
Window sunlight (10,000 lux)	30 minutes	Level 1 → Level 2 → Level 3
Window sunlight on cloudy day (5,000 lux)	60 minutes	Level 1 → Level 2 → Level 3
Indoor fluorescent lighting (500 lux)	3 hours	Level 1 → Level 2 → Level 3

- If Approximate exposure each day to generate power for normal daily operation.
- If Approximate exposure to last power on one day.
- For slow recovery reference only. It depends on lighting conditions.
- For details about the operating time and daily operating conditions, see the "Power Supply" section of the Specifications.

Power Saving

Power Saving enters a sleep state automatically whenever the watch is left for a certain period in an area where it is dark. The table below shows how watch functions are affected by Power Saving.

- There actually are two sleep state levels: "second hand sleep" and "function sleep".

Sleep State or Dark	Operation
60 to 70 minutes (second hand sleep)	(2) Second Hand: only stopped at 12 o'clock; all other functions enabled
6 or 7 days (function sleep)	All functions, including atomic timekeeping, disabled Internal timekeeping maintained

- The watch will not enter a sleep state between 6:00 AM and 9:59 PM. If the watch is already in a sleep state when 6:00 AM arrives, however, it will remain in the sleep state.
- The watch will not enter a sleep state while it is in the Sleepwatch Mode.

To recover from the sleep state

Move the watch to a well-lit area or press any button.

Radio-Controlled Atomic Timekeeping

This watch receives a time calibration signal and updates its time setting accordingly; however, when using the watch outside of areas covered by time calibration signals, you will have to adjust the settings manually as required. See "Configuring Current Time and Date Settings Manually" for more information.

This section explains how the watch updates its time settings when the city code selected as the Home City is in Japan, North America, Europe, or China, and is one that supports time calibration signal reception.

If your Home City code setting is this:	The watch can receive the signal from the time station located here:
USA, USA, USA	Kuhlen (Germany), Mannheim (Germany)
USA, USA, USA	Springfield (China)
USA, USA, USA	Springfield (China)
USA, USA, USA	Springfield (China)
USA, USA, USA	Springfield (China)
USA, USA, USA	Springfield (China)

Important

- The areas covered by HPL and AMC are quite far from the calibration signal transmitters, so certain conditions may cause reception problems.
- When HPL or AMC is selected as the Home City, only the time and date are adjusted according to the time calibration signal. You need to switch manually between standard time and daylight saving time (DST) if required. See "To toggle the Home City time between standard time and daylight saving time" for information about how to do this.
