During the last few years industrial fermentation technologies have advanced in order to improve the quality of the final product Some examples of those modern technologies are the biotechnology developments of microbial materials such as *Saccharomyces* and non *Saccharomyces* yeasts or lactic bacteria from different genera Other technologies are related to the use of additives and adjuvants such as nutrients enzymes fining agents or preservatives and their management which directly influence the quality and reduce the risks in final fermentation products Other technologies are based on the management of thermal treatments filtrations pressure applications ultrasounds UV and so on which have also led to improvements in fermentation quality in recent years The aim of the issue is to study new technologies able to improve the quality parameters of fermentation products such as aroma color turbidity acidity or any other parameters related to improving sensory perception by the consumers Food safety parameters are also included Natural Polymers and Biopolymers II Sylvain

Caillol, 2021-05-05 BioPolymers could be either natural polymers polymer naturally occurring in Nature such as cellulose or starch or biobased polymers that are artificially synthesized from natural resources Since the late 1990s the polymer industry has faced two serious problems global warming and anticipation of limitation to the access to fossil resources One solution consists in the use of sustainable resources instead of fossil based resources Hence biomass feedstocks are a promising

resource and biopolymers are one of the most dynamic polymer area. Additionally, biodegradability is a special functionality conferred to a material bio based or not. Very recently, facing the awareness of the volumes of plastic wastes, biodegradable polymers are gaining increasing attention from the market and industrial community. This special issue of *Molecules* deals with the current scientific and industrial challenges of Natural and Biobased Polymers through the access of new biobased monomers, improved thermo mechanical properties and by substitution of harmful substances. This themed issue can be considered as collection of highlights within the field of Natural Polymers and Biobased Polymers which clearly demonstrate the increased interest in this field. We hope that this will inspire researchers to further develop this area and thus contribute to a future more sustainable society.

Biogenic Amines and Food Safety Maria Martuscelli, Dino Mastrocola, 2021-08-31

Biogenic amines are bioactive compounds distributed in foods of all origins. Apart from their fundamental role in many bodily functions, there has recently been great interest in their toxicological potential. Much research is being carried out to understand their occurrence related to both desired and undesired fermentative phenomena, chemical spoilage, low hygienic conditions, wrong handling and criticism about technological factors of process and storage conditions. All these causes can contribute to a higher content of biogenic amines in food, particularly of those hazardous to human health. This book aims to collect scientific studies looking for new tools to limit the overproduction of biogenic amines in food, search for new food sources of biogenic amines and to spotlight the concept of safe food and bioactive amines content.
