Kelemen,2013-01-30 Many different quality approaches are available in the software industry Some of the approaches such as ISO 9001 are not software specific i e they define general requirements for an organization and they can be used at any company Others such as Automotive SPICE have been derived from a software specific approach and can be used for improving specific in this case automotive processes Some are created to improve development processes e g CMMI for Development others focus on services e g CMMI for Services and again others are related to particular processes such as

software testing e.g. TMMi or resource management e.g. People CMM. A number of differences among quality approaches exist and there can be various situations in which the usage of multiple approaches is required e.g. to strengthen a particular process with multiple quality approaches or to reach certification of the compliance to a number of standards. First of all it has to be decided which approaches have potential for the organization. In many cases one approach does not contain enough information for process implementation. Consequently the organization may need to use several approaches and the decision has to be made how the chosen approaches can be used simultaneously. This area is called Multi model Software Process Improvement (MSPI). The simultaneous usage of multiple quality approaches is called the multi model problem. In this dissertation we propose a solution for the multi model problem which we call the Process Based Unification (PBU) framework. The PBU framework consists of the PBU concept, a PBU process and the PBU result. We call PBU concept the mapping of quality approaches to a unified process. The PBU concept is operationalized by a PBU process. The PBU result includes the resulting unified process and the mapping of quality approaches to the unified process. Accordingly we addressed the following research question: Does the PBU framework provide a solution?

Migration Use Cases with the Migration Manager Version 7.5 Rebecca Alsop, Mohamed Amine Bourenane, Brian Davis, Bradley Downing, Vasfi Gucer, Armen Pischdotchian, Sampath Sriramadhesikan, IBM Redbooks, 2013-03-22. By using the Migration Manager you can migrate configuration content from one production environment to another. The typical use is to migrate configuration content from a development environment to a test environment and then on to production for the Tivoli process automation engine and its applications such as IBM SmartCloud Control Desk. The goal of migration is to ensure that your production environment fully meets the needs of your users. This IBM Redbooks publication is an update of the existing book *Migration Use Cases with the Migration Manager SG24-7906* and covers the most common migration use cases with the Migration Manager including the capabilities that were introduced with Tivoli's process automation engine V7.5. These use cases are only a small subset of the possible migration scenarios that can be performed by the Migration Manager but they were chosen to be representative of the capabilities of the Migration Manager. In addition to these use cases the book presents a migration strategy and a comprehensive chapter about troubleshooting possible migration problems when the Migration Manager is used. We strongly suggest that you read Chapter 1 Migration strategy on page 1 first before reading the other chapters. This chapter gives you a good foundation for all of the migration scenarios that are covered in the book. This book is a reference for IT Specialists and IT Architects working on migrating configuration content from one production environment to another by using the Migration Manager.
