Department of the Air Force,1976 **Federal Register** ,2013-11 *Ford AOD Transmissions* George Reid,2014-06-16 While millions of Ford rear wheel drive cars are equipped with the durable and simple C4 and C6 transmissions of the 1960s early in the 1980s Ford replaced those old designs with the AOD transmission for a new generation of cars Overdrive gears once popular before WWII were now becoming popular again as manufacturers were under increasing pressure to raise fuel economy to meet ever more demanding EPA standards A nice byproduct of that was more comfortable cruising speeds where your engine didn't have to work so hard in addition to getting better fuel economy In *Ford AOD Transmissions Rebuilding and Modifying the AOD AODE and 4R70W* author George Reid walks you through the process step by step from removing the transmission from the vehicle to complete disassembly and cleaning to careful reassembly to proper re installation and road testing Performance modifications are also covered as well as an ID guide for various model numbers evolutionary design changes shift kit installation and torque converter selection This book is ideal for people who already have one of these transmissions in their car as well as enthusiasts who would like to swap one of these more modern units into an older chassis to get all the benefits of overdrive If you plan on researching or working on any one of these overdrive models this book is a vital addition to your workbench or library *Multisensory and sensorimotor interactions in speech perception* Kaisa Tiippana,Jean-Luc Schwartz,Riikka Möttönen,2015-06-26 Speech is multisensory since it is perceived through several senses Audition is the most important one as speech is mostly heard The role of vision has long been acknowledged since many articulatory gestures can be seen on the talker's face Sometimes speech can even be felt by touching the face The best known multisensory illusion is the McGurk effect where incongruent visual articulation changes the auditory percept The interest in the McGurk effect arises from a major general question in multisensory research How is information from different senses combined Despite decades of research a conclusive explanation for the illusion remains elusive This is a good demonstration of the challenges in the study of multisensory integration Speech is special in many ways It is the main means of human communication and a manifestation of a unique language system It is a signal with which all humans have a lot of experience We are exposed to it from birth and learn it through development in face to face contact with others It is a signal that we can both perceive and produce The role of the motor system in speech perception has been debated for a long time Despite very active current research it is still unclear to which extent and in

which role the motor system is involved in speech perception Recent evidence shows that brain areas involved in speech production are activated during listening to speech and watching a talker s articulatory gestures Speaking involves coordination of articulatory movements and monitoring their auditory and somatosensory consequences How do auditory visual somatosensory and motor brain areas interact during speech perception How do these sensorimotor interactions contribute to speech perception It is surprising that despite a vast amount of research the secrets of speech perception have not yet been solved The multisensory and sensorimotor approaches provide new opportunities in solving them Contributions to the research topic are encouraged for a wide spectrum of research on speech perception in multisensory and sensorimotor contexts including novel experimental findings ranging from psychophysics to brain imaging theories and models reviews and opinions
