<p>1. What are the main components of the electron transport chain? How do they contribute to the production of ATP?</p>	<p>Answers: The electron transport chain is a series of protein complexes in the inner mitochondrial membrane that transfer electrons from NADH and FADH₂ to oxygen, which is reduced to water. This process is coupled with the pumping of protons across the membrane, creating a proton gradient that drives the synthesis of ATP by ATP synthase.</p>
