Lupker, 2004-06-02 Masked priming has a short and somewhat controversial history When used as a tool to study whether semantic processing can occur in the absence of conscious awareness considerable debate followed mainly about whether masked priming truly tapped unconscious processes For research into other components of visual word processing however in particular orthographic phonological and morphological a general consensus about the evidence provided by masked priming results has emerged This book contains thirteen original chapters in which these three components of visual word processing are examined using the masked priming procedure The chapters showcase the advantages of masked priming as an alternative to more standard methods of studying language processing that require comparisons of matched items Based on a recent conference this book offers up to date research findings and would be valuable to researchers and students of word recognition psycholinguistics or reading      **Informatics in Schools: Contributing to 21st Century Education** Ivan Kalas, Roland T. Mittermeir, 2011-10-12 This book constitutes the refereed proceedings of the 5th International Conference on Informatics in Schools Situation Evolution and Perspectives ISSEP 2011 held in Bratislava Slovakia in October 2011 The 20 revised full papers presented were carefully reviewed and selected from 69 submissions A broad variety of topics related to teaching informatics in schools is addressed ranging from national experience reports to paedagogical and methodological issues The papers are organized in topical sections on informatics education the spectrum of options national perspectives outreach programmes teacher education informatics in primary schools advanced concepts of informatics in schools as well as competitions and exams      *Understanding Developmental Dyslexia: Linking Perceptual and Cognitive Deficits to Reading Processes* Pierluigi Zoccolotti, Peter F. de Jong, Donatella Spinelli, 2016-06-24 Understanding the mechanisms responsible for developmental dyslexia DD is a key challenge for researchers A large literature mostly concerned with learning to read in opaque orthographies emphasizes phonological interpretations of the disturbance Other approaches focused on the visual perceptual aspects of orthographic coding Recently this perspective was supported by imaging data showing that individuals with DD have hypo activation in occipito temporal areas a finding common to both transparent and opaque orthographies

Nevertheless it is difficult to infer causal relationships from activation data Accommodating these findings within the cognitive architecture of reading processes is still an open issue This is a general problem which is present in much of the literature For example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without DD failed to provide explicit links with the reading process Thus several areas of investigation e g acoustic deficits or magnocellular deficiencies have been plagued by replication failures Furthermore much research has neglected the possible contribution of comorbid symptoms By contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic co morbidities that make causal interpretations problematic This has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of DD Recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance Another critical issue in DD is that much of the research has been conducted in English speaking individuals However English is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on English to other more regular orthographies By contrast important information can be gotten from systematic comparisons across languages Thus the distinction between regular and irregular orthographies is another potentially fruitful area of investigation Overall in spite of much research current interpretations seem unable to integrate all available findings Some proposals focus on the cognitive description of the reading profile and explicitly ignore the distal causes of the disturbance Others propose visual acoustic or phonological mechanisms but fail to link them to the pattern of reading impairment present in different children The present Research Topic brings together studies based on different methodological approaches i e behavioural studies examining cognitive and psycholinguistic factors eye movement investigations biological markers neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies transparent and opaque to identify the mechanisms underlying DD The RT does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding developmental dyslexia
