**A Practical Guide to the Evaluation of Child Physical Abuse and Neglect** Angelo P. Giardino, Michelle A. Lyn, Eileen R. Giardino, 2010-06-09 As we near the 50th anniversary of the landmark article by C Henry Kempe and his colleagues entitled The Battered Child Syndrome which ushered in the modern era of professional attention by pediatricians and other child health professionals we have reason for both celebration and concern We can take heart that over the recent decades a great deal of professional attention focused on the problem of child abuse and neglect In every state of the country there are mandatory reporting laws that require nurses physicians and social workers to report suspicions of maltreatment to the appropriate authorities for investigation The act of reporting provides legal immunity to the reporter except when performed in bad faith Progress in understanding the factors that place children at risk for harm from physical abuse and neglect now permits prevention and intervention The peer reviewed literature dealing with child abuse and neglect has proliferated with high quality work being done and reported on the many dimensions related to the epidemiology mechanism treatment and prognosis of child maltreatment Efforts are being directed toward developing an evidence based approach to the prevention of child abuse and neglect These are some of the positives However negatives exist and remain reasons for concern Despite a tremendous amount of attention to the problem of maltreatment there are at least 3 million reports of suspected child abuse and neglect made annually with nearly 1 million cases being substantiated **International**
