technologies and their impact on the new international security environment across three levels of analysis While recent
technological developments such as Artificial Intelligence AI robotics and automation have the potential to transform
international relations in positive ways they also pose challenges to peace and security and raise new ethical legal and
political questions about the use of power and the role of humans in war and conflict This book makes a contribution to these
debates by considering emerging technologies across three levels of analysis 1 the international system systemic level
including the balance of power 2 the state and its role in international affairs and how these technologies are redefining and
challenging the state s traditional roles and 3 the relationship between the state and society including how these
technologies affect individuals and non state actors This provides specific insights at each of these levels and generates a
better understanding of the connections between the international and the local when it comes to technological advance
across time and space The chapters examine the implications of these technologies for the balance of power examining the
strategies of the US Russia and China to harness AI robotics and automation and how their militaries and private
corporations are responding how smaller and less powerful states and non state actors are adjusting the political ethical and
legal implications of AI and automation what these technologies mean for how war and power is understood and utilized in
