Designing and Reporting Experiments in Psychology Peter Harris, Matthew J. Easterbrook, Jessica S. Horst, 2021-08-20

This book will help undergraduate psychology students to write practical reports of experimental and other quantitative studies in psychology. It is designed to help with every stage of report writing and provides a resource that students can refer to throughout their degree up to and including when writing up a final year undergraduate project. Now fully updated in its fourth edition, this book maps to the seventh edition of the APA guidelines and offers more comprehensive advice, guidelines, and recommendations than ever before. Students will benefit from coverage of different forms of quantitative study, including online studies and studies that use questionnaires as well as experiments. A range of handy test yourself questions with answers at the end of the book. Self-reflection questions to prompt deeper understanding. Summary sections that articulate the main points and provide a useful revision aid. An Index of Concepts indicating where in the book every concept is introduced and defined. Updated advice on how to find and cite references. Expanded coverage of ethics in quantitative research, including how to write ethically. Common mistake symbols flagging areas where it's easy to be caught out. Peter Harris is Emeritus Professor of Psychology at the University of Sussex, UK, where he led the Social and Applied Psychology Group. He has taught research design and statistics for many years. He has published extensively in social and health psychology. Matthew J. Easterbrook is Senior Lecturer in Psychology at the University of Sussex, UK. He has taught statistics at a national and international level. Jessica S. Horst is Reader in Psychology at the University of Sussex, UK, where she is also the Director of Teaching and Learning. She has taught research methods in both the USA and the UK.

The SAGE Encyclopedia of Research Design Bruce B. Frey, 2022-01-27. The SAGE Encyclopedia of Research Design maps out how one makes decisions about research design, interprets data, and draws valid inferences. It undertakes research projects in an ethical manner and evaluates experimental design strategies and results. From A to Z, this four-volume work covers the spectrum of research design strategies and topics, including among other things: fundamental research design principles, ethics in the research process, quantitative versus qualitative and mixed method designs, completely randomized designs, multiple comparison tests, diagnosing agreement between data and models, fundamental assumptions in analysis of variance, factorial treatment designs, complete and incomplete block designs, Latin square and related designs, hierarchical designs, response surface designs, split plot designs, repeated measures designs, crossover designs, analysis of covariance, statistical software packages, and much more. Research design with its statistical underpinnings can be especially daunting for students and novice researchers. At its heart, research design might be described simply as a formalized approach toward problem solving, thinking, and acquiring knowledge, the success of which depends upon clearly defined objectives and appropriate choice of statistical design and analysis to meet those objectives. The SAGE Encyclopedia of Research Design will assist students and researchers with their work while providing vital information on research strategies.
