Chakraverty, Smita Tapaswini, Diptiranjana Behera, 2016-11-25 Differential equations play a vital role in the modeling of physical and engineering problems such as those in solid and fluid mechanics viscoelasticity biology physics and many other areas In general the parameters variables and initial conditions within a model are considered as being defined exactly In reality there may be only vague imprecise or incomplete information about the variables and parameters available This can result from errors in measurement observation or experimental data application of different operating conditions or maintenance induced errors To overcome uncertainties or lack of precision one can use a fuzzy environment in parameters variables and initial conditions in place of exact fixed ones by turning general differential equations into Fuzzy Differential Equations FDEs In real applications it can be complicated to obtain exact solution of fuzzy differential equations due to complexities in fuzzy arithmetic creating the need

for use of reliable and efficient numerical techniques in the solution of fuzzy differential equations These include fuzzy ordinary and partial fuzzy linear and nonlinear and fuzzy arbitrary order differential equations This unique work provides a new direction for the reader in the use of basic concepts of fuzzy differential equations solutions and its applications It can serve as an essential reference work for students scholars practitioners researchers and academicians in engineering and science who need to model uncertain physical problems

Boundary-value Problems with Free Boundaries for Elliptic Systems of Equations Valentin Nikolaevich Monakhov, Lev Ākovlevich Leĭfman, 1983 This book is concerned with certain classes of nonlinear problems for elliptic systems of partial differential equations boundary value problems with free boundaries The first part has to do with the general theory of boundary value problems for analytic functions and its applications to hydrodynamics The second presents the theory of quasiconformal mappings along with the theory of boundary value problems for elliptic systems of equations and applications of it to problems in the mechanics of continuous media with free boundaries problems in subsonic gas dynamics filtration theory and problems in elastico plasticity
