**Becoming the News** Ruth Palmer, 2017-12-05 What does it feel like to be featured quoted or just named in a news story A refugee family the survivor of a shooting a primary voter in Iowa the views and experiences of ordinary people are an important component of journalism While much has been written about how journalists work and gather stories what do we discover about the practice of journalism and attitudes about the media by focusing on the experiences of the subjects themselves In *Becoming the News* Ruth Palmer argues that understanding the motivations and experiences of those who have been featured in news stories voluntarily or not sheds new light on the practice of journalism and the importance many continue to place on the role of the mainstream media Based on dozens of interviews with news subjects *Becoming the News* studies how ordinary people make sense of their experience as media subjects Palmer charts the arc of the experience of making the news from the events that brought an ordinary person to journalists attention through the decision to cooperate with reporters interactions with journalists and reactions to the news coverage and its aftermath She explores what motivates someone to talk to the press whether they consider the potential risks the power dynamics between a journalist and their subject their expectations about the motivations of journalists and the influence of social media on their decisions and reception Pointing to the ways traditional news organizations both continue to hold on to and are losing their authority *Becoming the News* has important implications for how we think about the production and consumption of news at a time when Americans distrust the news media more than ever

Some Musings on Theta, Eta, and Zeta Floyd L. Williams, 2023-11-02 This book continues the applications of mathematics more specifically of theta eta and zeta functions and modular forms to various areas of theoretical physics It is a follow up and extension in some sense of the author's earlier book entitled *A window into zeta and modular physics* Some of the main topics are

- 1 A new approach to logarithmic corrections to black hole entropy
- 2 My recent work that provides for an explicit cold plasma black hole connection
- 3 Generalization of work of physicists on certain asymptotic problems relating to string theory for example by way of the general theory of modular forms of non positive weight
- 4 A construction of the  $E_8$  root lattice its theta function and its relevance for heterotic string theory
- 5 Applications of elliptic functions to KdV nonlinear Schrödinger and Duffing equations for example including a discussion of Lax pairs and the Miura transformation
- 6 Finite temperature zeta functions and partition functions for quantum fields in thermal equilibrium on various curved background spacetimes
- 7 Exact solutions of the Einstein gravitational field equations for Lemaitre and inhomogeneous cosmological models with a special focus on the Szekeres-Szafron exact solutions by way of the Weierstrass elliptic function
- 8 Elementary particles and my zeta function formula for higher spin fermionic particles this covers in particular the gravitino particle of spin  $3/2$  and bosons with integral spin  $s = 2, 3, 4, 5$

These are some sample topics Others include the continuous Heisenberg model reaction diffusion systems Dirichlet and Hecke  $L$  functions the modular  $j$  invariant the computation of the one loop effective potential for non compact

symmetric spaces the BTZ black hole Jacobi inversion formulas etc Thus there is a very large range of material with the first 9 chapters of preliminary expository background for mathematicians and physicists
