This publication gives the programmer the rules for writing programs that are to be compiled by the IBM OS/VS COBOL and IBM Full American National Standard COBOL compilers under the operating system. It is meant to be used as a reference manual in the writing of IBM American National Standard COBOL programs.

COBOL (Common Business Oriented Language) is a programmed language, similar to English, that is used for commercial data processing. It was developed by the Conference on Data Systems Languages (CODASYL). The standard of the language is American National Standard COBOL X3.23-1964, as approved by the American National Standards Institute (ANSI). American National Standard COBOL is compatible with, and identical to, International standard ISO/IEC 1591-1972 Programming Language COBOL.

IBM OS/VS COBOL and IBM OS Full American National Standard COBOL, Versions 2, 3, and 4, incorporate the eight processing modules defined in the highest level of the American National Standard. These modules include:

- Sorts
- Table Handling
- Sequential Access
- Random Access

- Register Values
- Representation
- Library

A significant number of IBM extensions are implemented as well; these extensions are printed on a **SHADED** background.
