**Problems** Slawomir Koziel, Leifur Leifsson, Xin-She Yang, 2014-10-01 Computational complexity is a serious bottleneck for the design process in virtually any engineering area While migration from prototyping and experimental based design validation to verification using computer simulation models is inevitable and has a number of advantages high computational costs of accurate high fidelity simulations can be a major issue that slows down the development of computer aided design methodologies particularly those exploiting automated design improvement procedures e g numerical optimization The continuous increase of available computational resources does not always translate into shortening of the design cycle because of the growing demand for higher accuracy and necessity to simulate larger and more complex systems Accurate simulation of a single design of a given system may be as long as several hours days or even weeks which often makes design automation using conventional methods impractical or even prohibitive Additional problems include numerical noise often present in the simulation data possible presence of multiple locally optimum designs as well as multiple conflicting objectives In this edited book various techniques that can alleviate solving computationally expensive engineering design problems are presented One of the most promising approaches is the use of fast replacement models so called surrogates that reliably represent the expensive simulation based model of the system device of interest but they are much cheaper and analytically tractable Here a group of international experts summarize recent developments in the area and demonstrate applications in various disciplines of engineering and science The main purpose of the work is to provide the basic concepts and formulations of the surrogate based modeling and optimization paradigm as well as discuss relevant modeling techniques optimization algorithms and design procedures Therefore this book should be useful to researchers and engineers from any discipline where computationally heavy simulations are used on daily basis in the design process **On the Use of**
