Crocodiles

Crocodiles are large reptiles belonging to the order Crocodylia. They are known for their remarkable strength, inhabiting both freshwater and brackish environments. These ancient creatures have been around for millions of years and have evolved into formidable predators with distinct physical characteristics.

Crocodiles possess a streamlined body covered in tough, scaly skin that provides protection and aids in swimming. Their powerful legs, muscular tails, and webbed feet contribute to their efficient navigation through water. Crocodiles are renowned for their exceptional adaptability, allowing them to thrive in a variety of habitats such as rivers, lakes, swamps, and coastal areas.

These reptiles are voracious predators, preying on a diverse range of animals, including fish, mammals, and birds. Their hunting strategy often involves lurking beneath the water's surface, concealed by their camouflaged bodies, and ambushing unsuspecting prey with a swift and forceful strike. Crocodiles have a remarkable ability to consume large meals in one sitting, and their strong digestive systems enable them to extract maximum nutrients from their food.

The other two worksheets on the left and right show the beginning of questions and answers, respectively, but are partially obscured.
