the use of the first person plural is surprising Paul oscillates between singular I and plural We sometimes within the same sentence While this literary feature has never been seriously explored this study undertakes in the first part an investigation of the meanings of we in ancient Greek texts through several literary genres from Homer to the Hellenistic period The second part devoted to 2 Cor 10 13 shows the neat architecture of these chapters and the way the key theological message about weakness and power is delivered Also the occurrences of We and I throughout the text reveal a further underlying theology of authority En 2 Co 10 13 mais aussi dans l'ensemble du corpus paulinien l'utilisation de la première personne du pluriel est surprenante Paul passe souvent du je au nous et inversement parfois dans la même phrase Ce trait littéraire n'ayant pas encore été examiné de manière approfondie la présente étude commence par une enquête sur les sens du nous dans plusieurs genres littéraires dont le genre pistolaire d'Homer jusqu'à l'époque hellénistique La seconde partie consacrée à 2 Co 10 13 montre l'architecture soignée de ces chapitres ainsi que la manière dont Paul communique le message théologique sur la faiblesse et la force L'alternance des nous et des je exprime en outre une véritable théologie de l'autorité apostolique

Report and Accompanying Papers of the Commission Appointed by the President of the United States "to Investigate and Report Upon the True Divisional Line Between the Republic of Venezuela and British Guiana".: British blue book, nos. 1-5 United States. Commission to investigate and report upon the true division line between Venezuela and British Guiana, 1896

Message of the President of the United States United States. Department of State, 1886 *An Algebraic Introduction to Complex Projective Geometry* Christian Peskine, 1843 In this introduction to commutative algebra the author chooses a route that leads the reader through the essential ideas without getting embroiled in technicalities He takes the reader quickly to the fundamentals of complex projective geometry requiring only a basic knowledge of linear and multilinear algebra and some elementary group theory The author divides the book into three parts In the first he develops the general theory of noetherian rings and modules He includes a certain amount of homological algebra and he emphasizes rings and modules of fractions as preparation for working with sheaves In the second part he discusses polynomial rings in several variables with coefficients in the field of complex numbers After Noether's normalization lemma and Hilbert's Nullstellensatz

the author introduces affine complex schemes and their morphisms he then proves Zariski's main theorem and Chevalley's semi continuity theorem Finally the author's detailed study of Weil and Cartier divisors provides a solid background for modern intersection theory This is an excellent textbook for those who seek an efficient and rapid introduction to the geometric applications of commutative algebra
