Graded Logic Jozo Dujmović, 2025-09-19 Observable human commonsense reasoning can be modeled with graded propositional logic Our approach is distinctive in that all mathematical models are directly linked to specific observable and explainable mental activities Decision makers evaluate alternatives through perceived gradations of truth importance suitability simultaneity and substitutability Each graded variable has a semantic identity reflecting its role and meaning tied to the goals and interests of a specific decision maker Graded logic was introduced 50 years ago and this book presents its current status based on a half century of improvements and applications

The book includes examples of decision problems solved using graded logic models Our aim is to provide readers with a solid theoretical foundation in graded propositional calculus enabling them to confidently apply the LSP method on complex evaluation and decision problems Additionally the book suggests numerous directions for future research and applications

Risk Assessment Technologies, and Transportation, Storage, and Disposal of Radioactive Materials F. L. Cho,R. S. Project Scheduling Erik Leuven Demeulemeester,Willy S. Herroelen,2006-04-11 Our objectives in writing Project Scheduling A Research Handbook are threefold 1 Provide a unified scheme for classifying the numerous project scheduling problems occurring in practice and studied in the literature 2 Provide a unified and up to date treatment of the state of the art procedures developed for their solution 3 Alert the reader to various important problems that are still in need of considerable research effort Project Scheduling A Research Handbook has been divided into four parts Part I consists of three chapters on the scope and relevance of project scheduling on the nature of project scheduling and finally on the introduction of a unified scheme that will be used in subsequent chapters for the identification and classification of the project scheduling problems studied in this book Part II focuses on the time analysis of project networks Part III carries the discussion further into the crucial topic of scheduling under scarce resources Part IV deals with robust scheduling and stochastic scheduling issues Numerous tables and figures are used throughout the book to enhance the clarity and effectiveness of the discussions For the interested and motivated reader the problems at the end of each chapter should be considered as an integral part of the presentation

Essential Image Processing and GIS for Remote Sensing Jian Guo Liu,Philip J. Mason,2013-04-10 Essential Image Processing and GIS for Remote Sensing is an accessible overview of the subject and successfully draws together these three key areas in a balanced and comprehensive manner The book provides an overview of essential techniques and a selection of key case studies in a variety of application areas Key concepts and ideas are introduced in a clear and logical manner and described through the provision of numerous relevant conceptual illustrations Mathematical detail is kept to a minimum and only referred to where necessary for ease of understanding Such concepts are explained through common sense terms rather than in rigorous mathematical detail when explaining image processing and GIS techniques to enable students to grasp the essentials of a notoriously challenging subject area The book

is clearly divided into three parts with the first part introducing essential image processing techniques for remote sensing. The second part looks at GIS and begins with an overview of the concepts, structures and mechanisms by which GIS operates. Finally, the third part introduces Remote Sensing Applications. Throughout the book, the relationships between GIS, Image Processing and Remote Sensing are clearly identified to ensure that students are able to apply the various techniques that have been covered appropriately. The latter chapters use numerous relevant case studies to illustrate various remote sensing, image processing and GIS applications in practice.

Image Processing and GIS for Remote Sensing Jian Guo Liu, Philippa J. Mason, 2016-01-04. Following the successful publication of the 1st edition in 2009, the 2nd edition maintains its aim to provide an application-driven package of essential techniques in image processing and GIS together with case studies for demonstration and guidance in remote sensing applications. The book therefore has a 3 in 1 structure which pinpoints the intersection between these three individual disciplines and successfully draws them together in a balanced and comprehensive manner. The book conveys in-depth knowledge of image processing and GIS techniques in an accessible and comprehensive manner with clear explanations and conceptual illustrations used throughout to enhance student learning. The understanding of key concepts is always emphasised with minimal assumption of prior mathematical experience. The book is heavily based on the authors' own research. Many of the author-designed image processing techniques are popular around the world. For instance, the SFIM technique has long been adopted by ASTIRUM for mass production of their standard Pan-sharpen imagery data. The new edition also includes a completely new chapter on subpixel technology and new case studies based on their recent research.
