The Science of Romantic Relationships Theresa DiDonato, Brett Jakubiak, 2023-08-31 Following the lifecycle of romantic relationships this textbook offers a fresh diversity infused introduction to relationship science

Neuro-Narrative Therapy: New Possibilities for Emotion-Filled Conversations Jeffrey Zimmerman, 2018-04-03 Bringing interpersonal neurobiology and narrative therapy together Narrative therapy understands storytelling as the way we make sense of ourselves and life experience Many non narrative therapists have expressed great admiration and interests in the politics the work exposes the way it brings in the socio political context and the way it centers clients Yet despite its popularity and success as a useful therapeutic approach Narrative Therapy has been criticized as minimizing and failing to develop any extended discussion of something vital to our lives emotion Neuro Narrative Therapy attempts to redress this

problem by taking us first through standard Narrative practices and then showing how and where affect can be brought in and even privileged in the work After situating the evolution of Narrative Therapy in its historical context the book provides information about why emotions should be given an important place in the work Specifically it brings ideas and implications of some of the most exciting and novel theories interpersonal neurobiology and affective neuroscience to the practice of Narrative Therapy Readers will learn about the growing emphasis on the right brain and how an understanding of the ways in which emotion and affect are manifested by the brain can help us help our clients The possibilities for this new approach are many a freer discussion of the emotional side of your clients an understanding and sensitivity to the relation of body and mind attention to how the therapeutic relationship of our clients can become a resource in treatment and a renewed understanding of how our memories and thus our stories about our lives develop in early childhood and beyond For any therapist working in the area of Narrative Therapy and for any interested in the emerging understandings that science is bringing to appreciating how our brains develop with and among each other this book has something to offer Combining the neuro and the narrative as Jeffrey Zimmerman has done here will create a new direction in Narrative Therapy one in which our brain and body work together inviting a more direct and effective engagement with clients [The Abusive Personality](#) Donald G. Dutton, 2006-12-19 This influential book provides an innovative framework for understanding and treating intimate partner violence Integrating a variety of theoretical and empirical perspectives Donald G Dutton demonstrates that male abusiveness is more than just a learned pattern of behavior it is the outgrowth of a particular personality configuration He illuminates the development of the abusive personality from early childhood to adulthood and presents an evidence based treatment approach designed to meet this population's unique needs The second edition features two new chapters on the neurobiological roots of abusive behavior and the development of abusiveness in females **Philosophical Issues in Psychiatry** Kenneth S. Kendler, Josef Parnas, 2015-09 This multidisciplinary collection explores three key concepts underpinning psychiatry explanation phenomenology and nosology and their continuing relevance in an age of neuroimaging and genetic analysis This book opens with Dr Kenneth S Kendler's introduction to the philosophical grounding of psychiatric practice Chapters in the first section of the book then address the concept of explanation from the difficulties in describing complex behavior to the categorization of psychological and biological causality In the second section contributors discuss experience including the complex and vexing issue of how self agency and free will affect mental health The third and final section examines the organizational difficulties in psychiatric nosology and the instability of the existing diagnostic system Each chapter includes both an introduction by the editors and a concluding comment by another of the book's contributors Contributors John Campbell PhD Thomas Fuchs MD PhD Shaun Gallagher PhD Kenneth S Kendler MD Sandra D Mitchell PhD Dominic P Murphy PhD Josef Parnas MD DrMedSci Louis A Sass PhD Kenneth F Schaffner MD PhD James F Woodward PhD Peter Zachar PhD This is a serious and important book it is certainly one that researchers scholars and anyone involved

in trying to explain the nature of psychiatric disorders to a skeptical audience ought to read British Journal of Psychiatry

Kenneth S Kendler MD is the Rachel Brown Banks Distinguished Professor of Psychiatry at the Medical College of Virginia where he is also a professor of human genetics and the director of the Virginia Institute for Psychiatric and Behavioral Genetics He is the author of Genes Environment and Psychopathology Josef Parnas MD DrMedSci is a professor of psychiatry and the consultant medical director for the Department of Psychiatry at Copenhagen University He is the codirector of the National Danish Research Foundation's Center for Subjectivity Research

Psychiatry in the Scientific Image Dominic Murphy, 2012-01-13 An analysis of the understanding classification and explanation of mental disorders that proposes that psychiatry adopt the best practices of the cognitive sciences In Psychiatry in the Scientific Image Dominic Murphy looks at psychiatry from the viewpoint of analytic philosophy of science considering three issues how we should conceive of classify and explain mental illness If someone is said to have a mental illness what about it is mental What makes it an illness How might we explain and classify it A system of psychiatric classification settles these questions by distinguishing the mental illnesses and showing how they stand in relation to one another This book explores the philosophical issues raised by the project of explaining and classifying mental illness Murphy argues that the current literature on mental illness exemplified by the Diagnostic and Statistical Manual of Mental Disorders is an impediment to research it lacks a coherent concept of the mental and a satisfactory account of disorder and yields too much authority to commonsense thought about the mind He argues that the explanation of mental illness should meet the standards of good explanatory practice in the cognitive neurosciences and that the classification of mental disorders should group symptoms into conditions based on the causal structure of the normal mind

In touch with the future Alberto Gallace, Charles Spence, 2014-01-30 Out of all the human senses touch is the one that is most often unappreciated and undervalued Yet the surface of the human body the skin is actually one huge sheet of tactile receptors It provides us with the means to connect with our surroundings Despite the important role that vision plays in our everyday lives it is the skin that constitutes both the oldest and by far the largest of our sense organs The skin protects our body from the external world and at the same time informs us about what occurs on its surface In Touch With The Future explores the science of touch bringing together the latest findings from cognitive neuroscience about the processing of tactile information in humans The book provides a comprehensive overview of scientific knowledge regarding themes such as tactile memory tactile awareness consciousness tactile attention the role of touch in interpersonal and sexual interactions and the neurological substrates of touch It highlights the many ways in which our growing understanding of the world of touch can and in some cases already are being applied in the real world in everything from the development of virtual reality VR environments tablet PCs mobile phones and even teledildonics the ultimate frontier in terms of adult entertainment In addition the book shows how the cognitive neuroscience approach to the study of touch can be applied to help improve the design of many real world applications products as well as to many of our everyday

experiences such as those related to the appreciation of food marketing packaging design the development of enhanced sensory substitution systems art and man machine interfaces Crucially the authors makes a convincing argument for the view that one cannot really understand touch especially not in a real world context without placing it in a multisensory context That is the senses interact to influence tactile perception in everything from changing the feel of a surface or product by changing the sound it makes or the fragrance it has For students and researchers in the brain sciences this book presents a valuable and fascinating exploration into one of our least understood senses
