

The light, speckled moth rather than the black moth.

**Activity A:**  
**Light trees**

Get the Gizmo ready:

- Click **Reset** (↺).
- Check that the **LIGHT TREES** tab is selected.

**Introduction:** Before the 19<sup>th</sup> century in England, the air was very clean. The bark on trees was usually light in color. Abundant **lichens** growing on tree trunks also lightened their appearance.

**Question:** How does the color of a peppered moth affect survival?

1. Predict: Over time, what will happen to the populations of light and dark moths on light trees?

Over time, I believe the light moths will persist and procreate as the dark moths start to fade.

2. Experiment: Click **Play** and hunt peppered moths on light tree trunks for five years. In each year, try to capture as many moths as you can. Note: You can use the **spacebar** on your keyboard to quickly advance to the next tree.

After 5 years, select the **TABLE** tab and record the percentages of each moth type. (Note: The table shows current populations of each moth, not the number of captured moths.)

Year	Dark moths	Light moths
0	50%	50%
1	50%	50%
2	41%	59%
3	39%	61%
4	28%	72%
5	29%	71%

3. Analyze: What do your results show?

According to my findings, the population of light moths is steadily rising while that of dark moths is steadily declining.

4. Apply: Which type of moth do you think was more common before the 19<sup>th</sup> century, when most trees were light in color?

It's a Jungle in There David A. Rosenbaum, 2014-02-03 The saying It's a jungle out there refers to a competitive environment in which you'd better hone your skills if you hope to survive And you'd better do what you can to keep a roof over your head food in your belly a leaf on your loins and a mate who'll help pass on your genes to the next generation of jungle Jims and Janes Distinguished professor and cognitive psychologist David Rosenbaum takes this metaphor of surviving in the wild and applies it to the competitive arena within the brain He argues that the overarching theory of biology Darwin's theory should be the overarching theory of cognitive psychology the science of mental functioning He explores this new and intriguing idea by showing how neural elements compete and cooperate in a kind of inner jungle where only the fittest survive Competition within your brain does as much to shape who you are as the physical and figurative competition you face externally Just as the jungle night seethes with noisy creatures beckoning their mates issuing their warnings and settling their arguments you might have trouble falling asleep at night because the thoughts in your head are fighting for their chance at survival Rosenbaum's pursuit of this bold idea explains why we are shaped into who we are for better or worse because we are the hosts of inner battlefields Written in a light hearted tone and with reference to hypothetical neural creatures making their way in a tough environment Rosenbaum makes cognitive psychology and his theory easy to understand and exciting to ponder Rather than rely on the series of disconnected phenomena and collection of curiosities that often constitute cognitive psychology It's a Jungle in There provides a fascinating way to place all cognitive phenomena under one flourishing tree
