\_\_\_\_\_ is the science of life. A(n) \_\_\_\_\_ is anything that has all the characteristics of life. All living things are arranged in an orderly way. In other words, living things have \_\_\_\_\_. Most living things begin as one cell. The addition of mass is called \_\_\_\_\_. Over an organism's life, natural changes, called \_\_\_\_\_, take place. The production of offspring, or \_\_\_\_\_, must occur to enable the group of breeding organisms, or \_\_\_\_\_, to continue to exist. A living thing also has the ability to react to a(n) \_\_\_\_\_ from its internal or external environment. The reaction is called a \_\_\_\_\_. An organism must be able to maintain its internal conditions. If anything upsets its normal state, processes to restore \_\_\_\_\_ begin. Any inherited characteristic, or \_\_\_\_\_, developed in a species over time can enhance the species' ability to survive and produce offspring in its environment.
