Agency,Noaa NOAA Climate.gov,National Aeronautics and Space Administration,2014-06-16 Global Warming A Simple Guide to Global Warming What is Global Warming and its Effects Climate refers to the average weather conditions in a certain place over many years For example the climate in Minnesota is cold and snowy in the winter and the climate in Honolulu Hawaii is warm and humid all year long The climate in one area like the Midwest or Hawaii is called a regional climate The average climate around the world is called global climate When scientists talk about global climate change they re talking about the global climate and a pattern of change that s happening over many years One of the most important trends that scientists look at is the average temperature of the Earth which has been increasing for many years This is called global warming Rising global temperatures lead to other changes around the world such as stronger hurricanes melting glaciers and the loss of wildlife habitats That s because the Earth s air water and land are all related to one another and to the climate This means a change in one place can lead to other changes somewhere else For example when air temperatures rise the oceans absorb more heat from the atmosphere and become warmer Warmer oceans in turn can cause stronger storms More than 100 years ago people around the world started burning large amounts of coal oil and natural gas to power their homes factories and vehicles Today most of the world relies on these fossil fuels for their energy needs Burning fossil fuels releases carbon dioxide a heat trapping gas into the atmosphere which is the main reason why the climate is changing Heat trapping gases are also called greenhouse gases They exist naturally in the atmosphere where they help keep the Earth warm enough for plants and animals to live But people are adding extra greenhouse gases to the atmosphere These extra gases are

causing the Earth to get warmer setting off all sorts of other changes around the world on land in the oceans and in the atmosphere And these changes affect people plants and animals in many ways
