*Syllable and Word Languages* Javier Caro Reina, Renata Szczepaniak, 2014-10-24 This is the first volume concerned with the phonological typology of syllable and word languages based on the model of a complex multi-layered and hierarchically structured phonological system The main typological claim is that the phonetic and phonological make up of a language depends on the relevance of the prosodic categories In previous research the syllable and the phonological word have already proved to be typologically important The contributions in this volume discuss theoretical questions and address issues such as the variable structure of the phonological word the interplay between phonetics and

phonology as well as the effect of a language's phonological make up on its morphology or lexicon. The volume provides detailed synchronic and diachronic analyses of Non Indo European languages which will serve as a basis for further typological research.

**Emergentist Approaches to Language** Brian MacWhinney, Vera Kempe, Ping Li, Patricia J. Brooks, 2022-02-16. *Human Spoken Interaction as a Complex Adaptive System* Paul Seedhouse, Aki Siegel, 2024-05-31. *Human Spoken Interaction as a Complex Adaptive System* explains how human spoken communication functions combining two separate complex adaptive systems: the universal interaction engine and language's, which now number around 7,000. Siegel and Seedhouse offer a comprehensive overview of how the components and processes of the interaction engine work together to enable us to understand each other whatever the language. Through combining Complexity Science and Conversation Analysis, this book explains how to simultaneously analyse spoken interaction on micro and macro scales. Detailed analyses of L2 learners reveal them to be simultaneously expert in using the interaction engine and inexperienced in using the specific language. The study shows that the basic characteristics of the interaction engine are the same as for other life related complex systems and that it is possible to access the perspectives of participants inside this complex adaptive system as it is evolving.

**Grammar and Interaction** Emma Betz, 2008. This monograph provides a micro analytic description of the structure and communicative use of syntactic pivot constructions in German. Using the methodology of Conversation Analysis, this work shows that pivots emerge in interaction in response to local communicative needs. Exclusively found in spoken German, pivots allow a speaker to extend an utterance beyond a possible completion point in a syntactically and prosodically unobtrusive way. Speakers utilize this basic property to promote context specific actions, managing boundaries of speakership, bridging sequential and topical junctures and dealing with different types of interactional trouble. Through a close examination of syntactic pivots as an interactional resource, this work shows that spoken linguistic structures can only be fully understood if we acknowledge the temporality of language and view grammar as usage based and negotiable. This book thus contributes to a growing body of research at the intersection of grammar and interaction.
