Natural Stone Resources for Historical Monuments Richard Prikryl, Ákos Török, 2010 Natural stone is considered to be a versatile durable and aesthetically pleasing building material From the beginning of civilization important structures and monuments have been built from or based on natural stone Until the end of the nineteenth century the use of local stone resources was mostly in balance with the local environment Strict environmental legislation has resulted in the closing of many long standing quarries in industrialized countries which has led to a shortage of traditional stone varieties This has caused problems for restoration practice Cheap imported stone from less industrialized countries has become more widely available in recent years Some of the issues related to built stone conservation and restoration covered by this volume are the establishment of inventories of possible replacement stones understanding the decay mechanism and use of preventive conservation methods for slowing down decay processes evaluation of the properties of natural stone and assessing the risks of using replacement stones of different qualities
