

Journal Article Summary

Summarizing research articles will help you to develop your critical thinking skills and ability to express yourself in the written form. Here are some practical hints on how to summarize a research article. A research article is written to get across a lot of information quickly to a reader. Reading such articles can be tedious and sometimes frustrating unless you are familiar with scientific writing and the reasons for this style. Research articles are highly structured to make information easy to find. Unlike literary writing, scientific writing conveys quantifiable information; as a result, the writing is very lean and extra words are avoided.

A research article has the following major sections: **Title Page, Abstract, Introduction, Method, Results, Discussion, References, Tables and Figures.** *An article summary highlights the information in the Introduction, Methods, Results, and Discussion.* Before you can write such a summary, you need to read and understand the article.

Reading the Article

- ➤ *Allow enough time.* Plan to spend at least one half of the time you devote to this assignment to reading and understanding the article. Before you can write about research, you have to evaluate it. Before you can evaluate it, you have to understand it. Before you understand it, you have to digest it. Before you can digest, you have to read it, thoroughly. This takes more time than most students realize.
- ➤ *Scan the article first.* You will get bogged down in detail if you try to read a new article from start to finish. Initially you should briefly look at each section to identify:
 - general information about the study (stated in the Abstract and Introduction)
 - the hypothesis (-es) or research questions (in the Introduction)
 - the test of the hypothesis, including the sample, variables and operational definitions and the procedures used (in the Methods)
 - the findings (in the Results, including tables and figures)
 - how the findings were interpreted (in the Discussion).

Underline key sentences or write the key point (hypothesis, design, etc.) of each paragraph in the margin. It may also be helpful to write down these key points on a summary sheet as you come across them.

Jason Schukraft, 2017-07-05 For 2 000 years the standard philosophical model of knowledge was that it could be defined as a justified true belief According to this way of thinking we can know for example that we are human because 1 we believe ourselves to be human 2 that belief is justified others treat us as humans not as dogs and 3 the belief is true This definition which dates to Plato was challenged by Edmund Gettier in one of the most influential works of philosophy published in the last century a three page paper that produced two clear examples of justified true beliefs that could not in fact be considered knowledge Gettier s achievement rests on solid foundations provided by his mastery of the critical thinking skill of analysis By understanding the way in which Plato and every other epistemologist had built their arguments

he was able to identify the relationships between the parts and the assumptions that underpinned them. That precise understanding was what Gettier required to mount a convincing challenge to the theory one that was bolstered by a reasoning skill that put his counter case pithily and in a form his colleagues found all but unchallengeable.
