

How to Write a Systematic Review

Joshua D. Harris,^{*†} MD, Carmen E. Quatman,^{‡§} MD, PhD, M.M. Manning,[§] PhD, Robert A. Siston,^{||} PhD, and David G. Flanigan,^{‡§} MD

Investigation performed at Sports Medicine Center, The Ohio State University, Columbus, Ohio

Background: The role of evidence-based medicine in sports medicine and orthopaedic surgery is rapidly growing. Systematic reviews and meta-analyses are also proliferating in the medical literature.

Purpose: To provide the outline necessary for a practitioner to properly understand and/or conduct a systematic review for publication in a sports medicine journal.

Study Design: Review.

Methods: The steps of a successful systematic review include the following: identification of an unanswered answerable question; explicit definitions of the investigation's participant(s), intervention(s), comparison(s), and outcome(s); utilization of PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-analyses) guidelines and PROSPERO registration; thorough systematic data extraction; and appropriate grading of the evidence and strength of the recommendations.

Results: An outline to understand and conduct a systematic review is provided, and the difference between meta-analyses and systematic reviews is described. The steps necessary to perform a systematic review are fully explained, including the study purpose, search methodology, data extraction, reporting of results, identification of bias, and reporting of the study's main findings.

Conclusion: Systematic reviews or meta-analyses critically appraise and formally synthesize the best existing evidence to provide a statement of conclusion that answers specific clinical questions. Readers and reviewers, however, must recognize that the quality and strength of recommendations in a review are only as strong as the quality of studies that it analyzes. Thus, great care must be used in the interpretation of bias and extrapolation of the review's findings to translation to clinical practice. Without advanced education on the topic, the reader may follow the steps discussed herein to perform a systematic review.

Keywords: evidence-based medicine; meta-analysis; systematic review; PRISMA; PROSPERO

Evidence-based medicine utilizes the available medical literature to guide clinical decision making and assess the strength of clinical recommendations. When diagnosing and treating patients, practitioners employ evidence-based guidelines to advocate for or against an intervention. Meta-analyses and systematic reviews critically appraise and formally synthesize the best existing evidence to provide a statement of conclusion that answers specific clinical questions. Conduct of performance of this type of investigation is transparent, with explicit selection, evaluation, and reporting of the analyzed evidence.

In addition, these reviews account for and attempt to limit individual studies' biases. Thus, systematic reviews and meta-analyses are powerful in their ability to combine patient outcomes from distinct, yet similar, trials. Therefore, they have the potential to provide sufficient patient numbers and generalizable population information to make more powerful evidence-based conclusions. The quality and strength of recommendations in a review are only as strong as the quality of studies that are analyzed.^{1,2,32,34} Even randomized trials with high-level evidence are not without limitations. Thus, great care must be used in the interpretation of bias and extrapolation of the review's findings to translation to clinical practice. Thus, a systematic review of high-quality randomized controlled trials is a high-quality review, as these investigations are at the top of the evidence-based medicine hierarchy (Figure 1). Similarly, a systematic review of retrospective case series with level IV evidence is limited by the same biases that qualify the individual studies as level IV evidence. Given the recent rapid expansion of electronic and written medical publishing, systematic reviews and meta-analyses are very useful in that they synthesize and present large bodies of evidence to the busy clinician. The purpose of this review is to provide an outline for a practitioner to properly understand and/or conduct a systematic review for publication in a sports medicine journal.
