Gogos, 2013-12-02

Thoroughly revised edition of the classic text on polymer processing The Second Edition brings the classic text on polymer processing thoroughly up to date with the latest fundamental developments in polymer processing while retaining the critically acclaimed approach of the First Edition Readers are provided with the complete panorama of polymer processing starting with fundamental concepts through the latest current industry practices and future directions All the chapters have been revised and updated and four new chapters have been added to introduce the latest developments Readers familiar with

the First Edition will discover a host of new material including Blend and alloy microstructuring Twin screw based melting and chaotic mixing mechanisms Reactive processing Devolatilization theory mechanisms and industrial practice Compounding theory and industrial practice The increasingly important role of computational fluid mechanics A systematic approach to machine configuration design The Second Edition expands on the unique approach that distinguishes it from comparative texts Rather than focus on specific processing methods the authors assert that polymers have a similar experience in any processing machine and that these experiences can be described by a set of elementary processing steps that prepare the polymer for any of the shaping methods On the other hand the authors do emphasize the unique features of particular polymer processing methods and machines including the particular elementary step and shaping mechanisms and geometrical solutions Replete with problem sets and a solutions manual for instructors this textbook is recommended for undergraduate and graduate students in chemical engineering and polymer and materials engineering and science It will also prove invaluable for industry professionals as a fundamental polymer processing analysis and synthesis reference

DeGarmo's Materials and Processes in Manufacturing Ronald A. Kohser, Peter C. Collins, J. T. Black, 2025-02-11 Classic textbook introducing key concepts in manufacturing with a focus on practical applications updated to include the latest industry developments For over 65 years DeGarmo's *Materials and Processes in Manufacturing* has comprehensively presented both traditional and new manufacturing materials processes and systems in a descriptive non mathematical manner Students are first introduced to a range of engineering materials including metals plastics and polymers ceramics and composites The processes used to convert this stuff into things are then described along with their typical applications capabilities and limitations Segments cover casting forming machining welding and joining and additive manufacturing Supporting chapters present concepts relating to material selection heat treatment surface finishing measurement inspection and manufacturing systems The Fourteenth Edition has been updated to reflect the most current technologies Coverage of additive manufacturing 3D printing has been significantly expanded along with updates on new and advanced materials Case studies are featured throughout the book and review problems have been placed at the end of each chapter A full collection of online bonus material is provided for both students and instructors DeGarmo's *Materials and Processes in Manufacturing* Fourteenth Edition includes information on Equilibrium phase diagrams and the iron carbon system heat treatment and process capability and quality control Expendable mold and multiple use mold casting processes powder metallurgy particulate processing fundamentals of metal forming and bulk forming and sheet forming processes Cutting tool materials turning and boring processes milling drilling and related hole making processes and CNC processes and adaptive control in the A 4 and A 5 levels of automation Sawing broaching shaping and filing machining processes thread and gear manufacturing and surface integrity and finishing processes DeGarmo's *Materials and Processes in Manufacturing* has long set the standard for introducing students to the materials and processes in product manufacturing and has been incorporated

in programs of manufacturing mechanical industrial metallurgical and materials engineering as well as various technology degrees Its descriptive nature provides an excellent first exposure to its various subjects which may then be followed by advanced courses in specific areas *Forthcoming Books* Rose Arny,2003
