Routledge Handbook of Landscape and Food Joshua Zeunert,Tim Waterman,2018-02-02 Since the turn of the millennium there has been a burgeoning interest in and literature of both landscape studies and food studies Landscape describes places as relationships and processes Landscapes create people's identities and guide their actions and their preferences while at the same time are shaped by the actions and forces of people Food as currency medium and sustenance is a fundamental part of those landscape relationships This volume brings together over fifty contributors from around the world in forty profoundly interdisciplinary chapters Chapter authors represent an astonishing range of disciplines from agronomy anthropology archaeology conservation countryside management cultural studies ecology ethics geography heritage studies landscape architecture landscape management and planning literature urban design and architecture Both food studies and landscape studies defy comprehension from the perspective of a single discipline and thus such a range is both necessary and enriching The Routledge Handbook of Landscape and Food is intended as a first port of call for scholars and researchers seeking to undertake new work at the many intersections of landscape and food Each chapter provides an authoritative overview a broad range of pertinent readings and references and seeks to identify areas where new research is needed though these may also be identified in the many fertile areas in which subjects and chapters overlap within the book

Aquatic Habitats in Sustainable Urban Water Management Iwona Wagner, Jiri Marsalek, Pascal Breil, 2008-01-07. Aquatic habitats supply a wide range of vital ecosystem benefits to cities and their inhabitants. The unsustainable use of aquatic habitats, including inadequate urban water management itself, however, tends to alter and reduce their biodiversity and therewith diminish their ability to provide clean water, protect us from waterborne diseases and pollutants, keep urban areas safe from flooding and support recreational ecosystem services and even the aesthetic enjoyment of our world. *Aquatic Habitats in Sustainable Urban Water Management* is the result of collaboration between UNESCO's International Hydrological Programme and its Man and the Biosphere Programme. It aims at improving our understanding of aquatic habitats, related ecosystem goods and services and conservation and sustainable use, with a special focus on their integration into urban water management. The first part of this volume reviews basic concepts and challenges in urban aquatic habitats as well as strategies for their management and integration. The second part examines technical measures related to habitats management and rehabilitation along with their incorporation into urban planning and their role in human health. The final part looks at current urban aquatic habitat issues and practical approaches to solving them through the lens of case studies from around the globe.

Urban Water Series UNESCO IHP. Following from the Sixth Phase of UNESCO's International Hydrological Programme 2002-2007, the Urban Water Series UNESCO IHP addresses fundamental issues related to the role of water in cities and the effects of urbanization on the hydrological cycle and water resources. Focusing on the development of integrated approaches to sustainable urban water management, the Series should inform the work of urban water management practitioners, policy makers and educators throughout the world.

Urban Water Cycle Processes and Interactions Jiri Marsalek, Blanca Jimenez Cisneros, Mohammad Karamouz, Per-Arne Malmquist, Joel Avruch, Goldenfum, Bernard Chocat, 2008-01-07. Effective management of urban water should be based on a scientific understanding of the impact of human activity on both the urban hydrological cycle, including its processes and interactions, and the environment itself. Such anthropogenic impacts, which vary broadly in time and space, need to be quantified with respect to local climate, urban development, cultural, environmental and religious practices and other socio-economic factors. *Urban Water Cycle Processes and Interactions* represents the fruit of a project by UNESCO's International Hydrological Programme on this topic. The volume begins by introducing the urban water cycle concept and the

need for integrated or total management It then explores in detail the manifold hydrological components of the cycle the diverse elements of urban infrastructure and water services and the various effects of urbanization on the environment from the atmosphere and surface waters to wetlands soils and groundwater as well as biodiversity A concluding series of recommendations for effective urban water management summarize the important findings set forth here Urban Water Series UNESCO IHP Volumes Following from the Sixth Phase of UNESCO s International Hydrological Programme 2002 2007 the Urban Water Series UNESCO IHP addresses fundamental issues related to the role of water in cities and the effects of urbanization on the hydrological cycle and water resources Focusing on the development of integrated approaches to sustainable urban water management the Series should inform the work of urban water management practitioners policy makers and educators throughout the world

Regenerative Sanitation Thammarat Koottatep, Peter Emmanuel Cookey, Chongrak Polprasert, 2019-02-15 This book proposes Regenerative Sanitation as the next era of sanitation management and attempts to provide a foundation for the study of sanitation on the premise that sanitation is a complex and dynamic system that comprises of social ecological technological and resource systems The preconception is that sanitation will deliver maximal benefits to society only when there exists a cyclical integration of the three subsystems to enable appropriate linkages between technological design and the delivery platform so as to achieve optimal and sustained sanitation solutions It also calls for the rethinking of sanitation to change the narrative towards more progressive trajectories such as resource recovery and reuse rather than just amelioration It explores the contributions to food security livelihood support urban regeneration rural development and even local economies A new paradigm theory and ten principles for ensuring practical and effective sanitation solutions and management is presented In addition is a unique conceptual framework applicable to both developed and developing countries and to all stages processes and cycles of delivering sanitation solutions that could critically evaluate analyse and provide credible adequate and appropriate sanitation solutions All of which culminates in a strategic and practical application platform called Sanitation 4.0 that advocates for total rejuvenation and comprehensive overhaul with eight key strategic considerations for the implementation Regenerative Sanitation A New Paradigm For Sanitation 4.0 is inter and trans disciplinary and encourages collaboration between engineers scientists technologists social scientists and others to provide effective and practical user centred solutions It includes relevant case studies examples exercise and future research recommendations It is written as both a textbook for researchers and students as well as a practitioners guide for policymakers and professionals

Water for Food Security and Well-being in Latin America and the Caribbean Bárbara A. Willaarts, Alberto Garrido, M. Ramón Llamas, 2014-04-24 This volume provides an analytical and facts based overview on the progress achieved in water security in Latin America and the Caribbean LAC region over during the last decade and its links to regional development food security and human well being Although the book takes a regional approach covering a vast of data pertaining to most of the LAC region some chapters focus on seven

countries Argentina Brazil Chile Colombia Costa Rica Mexico and Peru A full understanding of LAC's trends progress requires framing this region in the global context an ever more globalized world where LAC has an increasing geopolitical power and a growing presence in international food markets The book's specific objectives are 1 exploring the improvements and links between water and food security in LAC countries 2 assessing the role of the socio-economic megatrends in LAC identifying feedback processes between the region's observed pattern of changes regarding key biophysical economic and social variables linked to water and food security and 3 reviewing the critical changes that are taking place in the institutional and governance water spheres including the role of civil society which may represent a promising means to advancing towards the goal of improving water security in LAC The resulting picture shows a region where recent socioeconomic development has led to important advances in the domains of food and water security Economic growth in LAC and its increasingly important role in international trade are intense in terms of use of natural resources such as land water and energy This poses new and important challenges for sustainable development The reinforcement of national and global governance schemes and their alignment on the improvement of human well-being is and will remain an inescapable prerequisite to the achievement of long-lasting security Supporting this bold idea with facts and science-based conclusions is the ultimate goal of the book
