

▲ CAUTION

UNIT DAMAGE HAZARD

Failure to follow this caution may result in premature failure of the igniter.

The igniter is fragile. DO NOT allow it to hit burner heat parts while removing or replacing it.

- a. If replacement is required, replace igniter on igniter bracket and then install assembly into burner box to avoid damage to the igniter.
- d. To replace igniter and bracket assembly, reverse steps 5a through 5d.
7. Reconnect igniter wire connection and insert the igniter wires in the slot in the manifold gasket, ensuring the igniter wires to ensure there is no tension on the igniter itself. (See Fig. 7.)

▲ WARNING

ELECTRICAL OPERATION HAZARD

Failure to follow this warning could result in personal injury or death.

Igniter wires must be securely placed in slot in manifold gasket or else they could become pinched or severed and electrically shorted.

Fig. 14 - Igniter

42-47813

8. Return the burner box cover.
9. Turn on gas and electrical supplies to furnace.
10. Verify igniter operation by initiating control board self-test furnace or by cycling thermostat.
11. Replace main furnace door.

H. ELECTRICAL CONTROLS AND WIRING

▲ WARNING

ELECTRICAL SHOCK HAZARD

Failure to follow this warning could result in personal injury or death.

There may be more than 1 electrical supply to the unit. Check accessories and cooling unit for additional electrical supplies.

The electrical ground and polarity for 115-v wiring must be maintained properly. Refer to Fig. 15 for field wiring information and to Fig. 21 for unit wiring information.

NOTE: If the polarity is not correct or furnace is not properly grounded, the STATUS LED on the furnace control will flash rapidly and prevent the furnace from operating. The control system also requires an earth ground for proper operation of the furnace control flame sensor.

The 24-v circuit contains an automotive-type, 3-amp fuse located on the furnace control. (See Fig. 16.) Any direct short of the 24-v wiring during installation, service, or maintenance will cause this fuse to blow. If fuse replacement is required, use ONLY a fuse of identical size. The furnace control LED will flash status code 24 when fuse needs to be replaced.

With power to the unit disconnected, check all electrical connections for tightness. Tighten all screws on electrical connections. If any loose or burned connections are found, disassemble the connection, clean all parts, strip wire, and reassemble properly and securely.

Reconnect electrical supply to unit and observe unit through 1 complete operating cycle and check for proper operation.

1. CHECKING HEAT TAPE OPERATION (IF APPLICABLE)

In applications where the ambient temperature around the furnace is 32°F or lower, freeze protection measures are required. If this application is where heat tape has been applied, check to ensure it will operate when low temperatures are present.

NOTE: Heat tape, when used, should be wrapped around the condensate drain trap and drain line. There is no need to use heat tape within the furnace casing. Most heat tapes are temperature activated, and it is not practical to verify the actual heating of the tape. Check the following:

1. Check for signs of physical damage to heat tape such as nicks, cuts, abrasions, gnawing by animals, etc.
2. Check for discolored heat tape insulation. If any damage or discolored insulation is evident, replace heat tape.
3. Check that heat tape power supply circuit is on.

▲ CAUTION

UNIT AND PROPERTY DAMAGE HAZARD

Failure to follow this caution may result in furnace component failure or water property damage.

If this furnace is to be operated in an unconditioned space where the ambient temperature may be 32°F (0°C) or lower, freeze protection measures must be taken. See CONDENSATE DRAIN PROTECTION section of Installation, Start-up, and Operating Instructions. (See Fig. 17.)
