Hurricane Resistant Construction Manual:

Hurricane Resistant Construction Manual Southern Building Code Congress International, United States. National Oceanic and Atmospheric Administration, 2005 The properties along the American Coast are one of the most sought after properties in the United States People are swarming to buy or build on beach property on the Atlantic Gulf and Pacific Coast The increase in population and building has created many problems Beaches are getting smaller and building density is increasing This increasing density increases the changes for large developed areas to be in the path of a hurricane and the larger the developed area the greater the potential for property loss and deaths Both coastal development will continue and hurricanes be spawned and make landfall If we are to minimize property loss along our coast we must construct buildings that will resist the water and wind forces in hurricanes The purpose of this manual is to provide design and construction details and technique for improving coastal construction *Hurricane Resistant Construction Manual* Southern Building Code Congress International, 1986

A Manual for Hurricane Resistant Construction Southern Building Code Congress International, National Committee on Property Insurance (U.S.), United States. Federal Emergency Management Agency, 1992

Coastal Construction Manual Christopher Jones, 2001-04 This manual will help individuals communities states and others create sustainable disaster resistant communities Describes the best practices in hazard identification planning siting design and construction that can be used in coastal residential construction Coastal areas offer significant natural resources and continue to draw an increasing population for recreation working and living These areas can also pose significant natural hazards from winds flooding earthquakes and tsunamis This manual describes the best practices in residential construction in coastal areas that can be used to help create sustainable and livable coastal communities Illustrated Coastal

Mason, William J. Neal, Orrin H. Pilkey, 1997 Another shore book that suggests ways to cope not only with disasters at the coast but with the frequent hazards encountered inland Part of the Living with the Shore Series *Mitigation Assessment Team Report; Hurricane Katrina in the Gulf Coast; Building Performance Observations Recommendations and Technical Guidance* , **The Encyclopedia of Associations and Information Sources for Architects, Designers, and Engineers** , **Living with Long Island's South Shore** Larry McCormick, 1984 The south shore of Long Island one of New York's greatest recreational assets is receding at the rate of up to six feet per year In many cases efforts to halt this erosion actually have increased it Buildings once thought safely constructed back from high tides today protrude far into the water Even more the number of homes and facilities built too close to the sea's edge has dramatically increased making the south shore probably less ready to withstand a major storm than at the time of the cataclysmic hurricane of 1938 Thus the question of what to do now to overcome and avoid these hazards takes on real urgency Pointing to past mistakes many Long Islanders insist that only by acting in an informed reasonable way can safe and environmentally sound development be possible for everyone

Summary Report on Building Performance - 2004 Hurricane Season (FEMA 490) Federal Emergency Agency, U. S. Department of Security, 2013-04-26 The nation will remember 2004 as a record setting year in terms of presidential disaster declarations and administered disaster aid In 2004 President Bush issued 68 disaster declarations of which 27 were due to hurricanes Time and again the U S was impacted by hurricane force winds and waves that damaged cities and small towns in 15 states Puerto Rico and the U S Virgin Islands Of all the regions that endured the hurricane season the State of Florida bore the brunt of the record setting storms as Hurricanes Charley Frances Ivan and Jeanne tested the federal and state fortitude in disaster response and recovery Communities were devastated as wind and water damage from the four storms battered residential commercial industrial and public facilities Disaster assistance totaling more than 4.4 billion was approved for Floridians and to date 1.24 million storm victims have applied for federal and state assistance FEMA 2005b The financial impact of the season will likely exceed 20 billion according to preliminary loss estimates from the Insurance Services Office's Property Claim Services PCS The four hurricanes that struck Florida in 2004 were all significant events however the hurricanes were each distinctive in terms of their wind and water action and resulting damages The first of these Charley designated a Category 4 was the first design level wind event to strike the U S mainland since Hurricane

Andrew 1992 and caused more wind damage than flood damage Frances Category 2 and Jeanne Category 3 while not as strong as Charley were still very damaging hurricanes resulting in additional wind damage Hurricane Ivan delivered not only strong winds Category 3 but also caused significant flood damage to buildings and other structures even those built above the 100 year flood elevation The impact of the four hurricanes was intensified by their back to back occurrence three of the hurricanes followed similar paths or had overlapping damage swaths Frances and Jeanne followed almost identical paths across Florida from the east coast around Port St Lucie to the west coast north of Tampa area These two very wide storms crossed the path of Charley which traveled west to east in central Florida creating an overlap of impacted areas in Orange Osceola Polk and Hardee counties As a result of these overlapping impact swaths damage resulting from the later hurricanes Frances and Jeanne was difficult to distinguish from earlier damage caused by Charley For instance roofs that failed during Frances or Jeanne may have been weakened or damaged by Charley and more prone to failure For this reason most of the recommendations and conclusions contained in this report are based on observations made after Hurricanes Charley and Ivan and are supported by observations made after Hurricanes Frances and Jeanne Following Hurricanes Charley and Ivan the FEMA Mitigation Assessment Teams MATs performed field observations to determine how well buildings in Florida and Alabama performed under stresses caused by the storms wind and water impacts A Rapid Response Data Collection Team performed field observations after Hurricane Frances that focused on critical and essential facilities however an assessment was not performed after Jeanne because Jeanne and Frances impacted a similar region Overall the MAT observed building performance success in structural systems designed and built after Hurricane Andrew This Summary Report focuses on the ongoing need for improvement in building performance
