

Welcome to the *Journal of Advanced Mathematics and Applications*

Mathematics is the *abstract science* of numbers, quantity, and space as well as their applications in other disciplines of sciences, engineering, society, and humanities. The modern domain of mathematics includes *pure, applied, denotational, numerical, computational, and cognitive mathematics*. The *key role of mathematics* is a *metamethodology* for rigorous, formal, and symbolic reasoning in order to model and explain the real and abstract worlds and their underpinning mechanisms and rules. The basic methodology of mathematics is *abstraction and symbolic inferences*. The essences of mathematics are to facilitate abstraction, quantification, and induction, to elicit/represent generic abstract objects, to manipulate symbols for efficient reasoning, to establish axiomatic rules as foundations, and to provide derivation rules for deductive inference. Mathematics is also the core form of abstract intelligence that is shared by humans, artificial intelligent systems, cognitive robots, and autonomous agents in almost all scientific, engineering, social, and humanity disciplines.

Denotational mathematics is a category of mathematical structures that deals with complex mathematical objects in the domain of hyperstructures (H), beyond those of real numbers and bits in \mathbb{R} or \mathbb{B} , by a series of embedded dynamic functions and processes in order to formalize rigorous expressions and inferences. A wide variety of contemporary denotational mathematics have emerged in the recent decades in order to rigorously deal with complex engineering problems, highly intelligent systems, efficient knowledge representation models, formal computational methodologies, and fuzzy causal inferences. Paradigms of the latest development in denotational mathematics are such as *concept algebra, system algebra, behavior process algebra, inference algebra, semantic algebra, granular algebra, and visual semantic algebra* as collected in the repository of the *International Institute of Cognitive Informatics and Cognitive Computing (IICIC)* at <http://www.ucalgary.ca/iicic/>.

Arakelov

Geometry over Adelic Curves Huayi Chen, Atsushi Moriawaki, 2020-01-29 The purpose of this book is to build the fundament of an Arakelov theory over adelic curves in order to provide a unified framework for research on arithmetic geometry in several directions By adelic curve is meant a field equipped with a family of absolute values parametrized by a measure space such that the logarithmic absolute value of each non zero element of the field is an integrable function on the measure space In the literature such construction has been discussed in various settings which are apparently transversal to each other The authors first formalize the notion of adelic curves and discuss in a systematic way its algebraic covers which are important in the study of height theory of algebraic points beyond Weil Lang's height theory They then establish a theory of adelic vector bundles on adelic curves which considerably generalizes the classic geometry of vector bundles or that of Hermitian vector bundles over an arithmetic curve They focus on an analogue of the slope theory in the setting of adelic curves and in particular estimate the minimal slope of tensor product adelic vector bundles Finally by using the adelic vector bundles as a tool a birational Arakelov geometry for projective variety over an adelic curve is developed As an application a vast generalization of Nakai Moishezon's criterion of positivity is proven in clarifying the arguments of geometric nature from several fundamental results in the classic geometry of numbers Assuming basic knowledge of algebraic geometry and algebraic number theory the book is almost self contained It is suitable for researchers in arithmetic geometry as well as

graduate students focusing on these topics for their doctoral theses *Fuzzy Techniques in Image Processing* Etienne E. Kerre, Mike Nachtgael, 2013-03-19 Since time immemorial vision in general and images in particular have played an important and essential role in human life Nowadays the field of image processing also has numerous scientific commercial industrial and military applications All these applications result from the interaction between fundamental scientific research on the one hand and the development of new and high standard technology on the other hand Regarding the scientific component quite recently the scientific community became familiar with fuzzy techniques in image processing which make use of the framework of fuzzy sets and related theories The theory of fuzzy sets was initiated in 1965 by Zadeh and is one of the most developed models to treat imprecision and uncertainty Instead of the classical approach that an object belongs or does not belong to a set the concept of a fuzzy set allows a gradual transition from membership to nonmembership providing partial degrees of membership Fuzzy techniques are often complementary to existing techniques and can contribute to the development of better and more robust methods as has already been illustrated in numerous scientific branches With this volume we want to demonstrate that the introduction and application of fuzzy techniques can also be very successful in the area of image processing This book contains high quality contributions of over 30 field experts covering a wide range of both theoretical and practical applications of fuzzy techniques in image processing Handbook of Research on Advanced Applications of Graph Theory in Modern Society Pal, Madhumangal, Samanta, Sovan, Pal, Anita, 2019-08-30 In the world of mathematics and computer science technological advancements are constantly being researched and applied to ongoing issues Setbacks in social networking engineering and automation are themes that affect everyday life and researchers have been looking for new techniques in which to solve these challenges Graph theory is a widely studied topic that is now being applied to real life problems The Handbook of Research on Advanced Applications of Graph Theory in Modern Society is an essential reference source that discusses recent developments on graph theory as well as its representation in social networks artificial neural networks and many complex networks The book aims to study results that are useful in the fields of robotics and machine learning and will examine different engineering issues that are closely related to fuzzy graph theory Featuring research on topics such as artificial neural systems and robotics this book is ideally designed for mathematicians research scholars practitioners professionals engineers and students seeking an innovative overview of graphic theory *The AMTE Handbook of Mathematics Teacher Education* Babette M. courses for the major and grade ranges K 20 and all chapters highlight relevant connections to the AMTE Standards for Preparing Teachers of Mathematics Most importantly this volume explores what we do not yet fully understand and where we are going In essence it considers how we can move the field forward The 95 contributing authors range from graduate students to those who have served as leaders in the field in multiple ways for many years Authors include K 12 teachers school administrators district leaders graduate students higher education faculty and professional development facilitators

Second International Handbook of Mathematics Education Alan Bishop, M.A. (Ken) Clements, Christine Keitel-Kreidt, Jeremy Kilpatrick, Frederick Koon-Shing Leung, 2012-02-02 ALAN 1 BISHOP The first International Handbook on Mathematics Education was published by Kluwer Academic Publishers in 1996 However most of the writing for that handbook was done in 1995 and generally reflected the main research and development foci prior to 1994 There were four sections 36 chapters and some 150 people contributed to the final volume either as author reviewer editor or critical friend The task was a monumental one attempting to cover the major research and practice developments in the international field of mathematics education as it appeared to the contributors in 1995 Inevitably there were certain omissions some developments were only starting to emerge and some literatures were only sketchy and speculative However that Handbook has had to be reprinted three times so it clearly fulfilled a need and I personally hope that it lived up to what I wrote in its Introduction The Handbook thus attempts not merely to present a description of the international state of the field but also to offer synthetic and reflective overviews on the different directions being taken by the field on the gaps existing in our present knowledge on the current problems being faced and on the future possibilities for development Bishop et al 1996 Since that time there has been even more activity in our field and now seems a good time to take stock again to reflect on what has happened since 1995 and to create a second Handbook with the same overall goals *Journal of Proceeding and Addresses* National Education Association of the United States, 1907 Vols for 1866 70 include Proceedings of the American Normal School Association 1866 69 include Proceedings of the National Association of School Superintendents 1870 includes Addresses and journal of proceedings of the Central College Association **Interpretation of Neutrosophic Soft cubic**

T-ideal in the Environment of PS-Algebra Neha Andaleeb Khalid, Muhammad Saeed, Florentin Smarandache, 2023-01-01 This study provides an innovative approach to neutrosophic algebraic structures by introducing a new structure called Neutrosophic Soft Cubic T ideal NSCTID which combines T ideal TID and neutrosophic Soft Cubic Sets NSCSs within the framework of PS Algebra Within the already existing neutrosophic cubic structures the addition of soft sets with the characteristics of TID makes this structure more desirable The theoretical development of the proposed structure includes the application of fundamental ideas as union intersection the Cartesian product and homomorphism We also introduce the notions of NSCTID translation and NSCTID multiplication to further enhance the structure of NSCTID By applying the idea of translation and multiplication we offer improved algorithm for neutrosophic cubic sets to deal with different parameters that

are satisfying the TID's distinctive characteristics Through this thorough research we offer an elementary understanding of NSCTID and its capabilities providing the way to new algebraic structures
