Evolution of Cenozoic Land Mammal Faunas and Ecosystems Isaac Casanovas-Vilar, Lars W. van den Hoek Ostende, Christine M. Janis, Juha Saarininen, 2023-08-08 This volume presents an array of different case studies which take as primary material data sourced from the NOW New and Old Worlds database of fossil mammals The NOW database was one of the very first large paleobiological databases and since 1996 it has been expanded from including mainly Neogene European land mammals to cover the entire Cenozoic at a global scale In the last two decades the number of works that are based in the use of huge databases to explore ecological and evolutionary questions has increased exponentially and even though the importance of big data in paleobiological research has been outlined in selected chapters of general works no volume has appeared before this one which solely focuses on the databases as a primary source in reconstructing the past The purpose of this book is to

provide an illustrative volume showing the importance of big data in paleobiological research and presenting a broad array of unpublished examples and case studies The book is mainly aimed to professional palaeobiologists working with Cenozoic land mammals but the scope of the book is broad enough to fit the interest for evolutionary biologists paleoclimatologists and paleoecologists The volume is divided in four parts The first part includes two chapters on the development of large paleobiological databases providing a first hand account on the logic and the functioning of these databases This is a much needed perspective which is ignored by most researchers and users of such databases and even if centered in the NOW database the lessons that can be learned from this part can be extended to other examples After this introductory part the body of the book follows and is divided into three parts patterns in regional faunas large scale patterns and processes and ecological biogeographical and evolutionary patterns of key taxa Each chapter is written by well known specialists in the field with some participation of members of the NOW advisory board The array of selected mammal taxa ranges from carnivores equids ruminants and rodents to the genus Homo The topics studied also include the diversification and radiation of major clades large scale paleobiogeographical patterns the evolution of ecomorphological patterns and paleobiological problems such as evolution of body size or species longevity In most cases the results are discussed in relation to protracted environmental or paleogeographic changes

Encyclopedia of Animal Behavior, 2019-01-21 Encyclopedia of Animal Behavior Second Edition Four Volume Set the latest update since the 2010 release builds upon the solid foundation established in the first edition Updated sections include Host parasite interactions Vertebrate social behavior and the introduction of overview essays that boost the book's comprehensive detail The structure for the work is modified to accommodate a better grouping of subjects Some chapters have been reshuffled with section headings combined or modified Represents a one stop resource for scientifically reliable information on animal behavior Provides comparative approaches including the perspective of evolutionary biologists physiologists endocrinologists neuroscientists and psychologists Includes multimedia features in the online version that offer accessible tools to readers looking to deepen their understanding

The Evolutionary Biology of

Species Timothy G. Barraclough, 2019-06-20 Species are central to understanding the origin and dynamics of biological diversity explaining why lineages split into multiple distinct species is one of the main goals of evolutionary biology However the existence of species is often taken for granted and precisely what is meant by species and whether they really exist as a pattern of nature has rarely been modelled or critically tested This novel book presents a synthetic overview of the evolutionary biology of species describing what species are how they form the consequences of species boundaries and diversity for evolution and patterns of species accumulation over time The central thesis is that species represent more than just a unit of taxonomy they are a model of how diversity is structured as well as how groups of related organisms evolve The author adopts an intentionally broad approach stepping back from the details to consider what species constitute both theoretically and empirically and how we detect them drawing on a wealth of examples from microbes to multicellular organisms

Methods in Paleoecology Darin A. Croft, Denise F. Su, Scott W. Simpson, 2018-10-27 This volume focuses on the reconstruction of past ecosystems and provides a comprehensive review of current techniques and their application in exemplar studies The 18 chapters address a wide variety of topics that span vertebrate paleobiology and paleoecology body mass postcranial functional morphology evolutionary dental morphology microwear and mesowear ecomorphology mammal community structure analysis contextual paleoenvironmental studies paleosols and sedimentology ichnofossils pollen phytoliths plant macrofossils and special techniques bone microstructure biomineral isotopes inorganic isotopes 3 D morphometrics and ecometric modeling A final chapter discusses how to integrate results of these studies with taphonomic data in order to more accurately characterize an ancient ecosystem Current investigators advanced undergraduates and graduate students interested in the field of paleoecology will find this book immensely useful The length and structure of the volume also makes it suitable for teaching a college level course on reconstructing Cenozoic ecosystems

current coverage of each topic Provides ancillary learning tools like tables illustrations and multimedia features to assist with the comprehension process Biogeography and Evolution in New Zealand Michael Heads,2016-10-04 Biogeography and Evolution in New Zealand provides the first in depth treatment of the biogeography of New Zealand a region that has been a place of long enduring interest to ecologists evolutionary scientists geographers geologists and scientists in related disciplines It serves as a key addition to the contemporary discussion on regionalization how is New Zealand different from the rest of the world With what other areas does it share its geology history and biota Do new molecular phylogenies show that New Zealand may be seen as a biological parallel universe within global evolution **The Runes of Evolution** Simon Conway Morris,2015-06-30 How did human beings acquire imaginations that can conjure up untrue possibilities How did the Universe become self aware In *The Runes of Evolution* Simon Conway Morris revitalizes the study of evolution from the perspective of convergence providing us with compelling new evidence to support the mounting scientific view that the history of life is far more predictable than once thought A leading evolutionary biologist at the University of Cambridge Conway Morris came into international prominence for his work on the Cambrian explosion especially fossils of the Burgess Shale and evolutionary convergence which is the process whereby organisms not closely related not monophyletic independently evolve similar traits as a result of having to adapt to similar environments or ecological niches In *The Runes of Evolution* he illustrates how the ubiquity of convergence hints at an underlying framework whereby many outcomes not least brains and intelligence are virtually guaranteed on any Earth like planet Conway Morris also emphasizes how much of the complexity of advanced biological systems is inherent in microbial forms By casting a wider net *The Runes of Evolution* explores many neglected evolutionary questions Some are remarkably general Why for example are convergences such as parasitism carnivory and nitrogen fixation in plants concentrated in particular taxonomic hot spots Why do certain groups have a particular propensity to evolve toward particular states Some questions lead to unexpected evolutionary insights If bees sleep as they do do they dream Why is that insect copulating with an orchid Why have sponges evolved a system of fiber optics What do mantis shrimps and submarines have in common If dinosaurs had not gone extinct what would have happened next Will a saber toothed cat ever re evolve Conway Morris observes Even amongst the mammals let alone the entire tree of life humans represent one minute twig of a vast and largely fossilized arborescence Every living species is a linear descendant of an immense string of now vanished ancestors but evolution itself is the very reverse of linear Rather it is endlessly exploratory probing the vast spaces of biological hyperspace Indeed this book is a celebration of how our world is and was populated by a riot of forms a coruscating tapestry of life *The Runes of Evolution* is the most definitive synthesis of evolutionary convergence to be published to date Effects of Climate Change on Birds Peter O. Dunn,Anders Pape Møller,2019-07-16 Climate change issues are attracting rapidly increasing interest from a wide range of biologists due to their unprecedented effects on global biodiversity although there remains a lack of general knowledge as to the

environmental consequences of such rapid change Compared with any other class of animals birds provide more long term data and extensive time series a more geographically and taxonomically diverse source of information a richer source of data on a greater range of topics dealing with the effects of climate change and a longer tradition of extensive research The first edition of the book was widely cited and this new edition continues to provide an exhaustive and up to date synthesis of our rapidly expanding level of knowledge as it relates to birds highlighting new methods and areas for future research **Seed Dispersal** Andrew J. Dennis,R.J. Green,E.W. Schupp,2007 Fresh concepts in the study of seed dispersal are spurring a host of exciting new questions new answers to old questions new methods and approaches and a reinvigoration of the field Seed Dispersal Theory and its Application in a Changing World presents both recent advances and reviews of current knowledge demonstrating the vigour and vibrancy of the field It provides new perspectives and directions at a time when efforts to meet growing environmental challenges threatening natural systems are of utmost importance **Urban Evolutionary Biology** Marta Szulkin,Jason Munshi-South,Anne Charmantier,2020-05-05 Urban Evolutionary Biology fills an important knowledge gap on wild organismal evolution in the urban environment whilst offering a novel exploration of the fast growing new field of evolutionary research The growing rate of urbanization and the maturation of urban study systems worldwide means interest in the urban environment as an agent of evolutionary change is rapidly increasing We are presently witnessing the emergence of a new field of research in evolutionary biology Despite its rapid global expansion the urban environment has until now been a largely neglected study site among evolutionary biologists With its conspicuously altered ecological dynamics it stands in stark contrast to the natural environments traditionally used as cornerstones for evolutionary ecology research Urbanization can offer a great range of new opportunities to test for rapid evolutionary processes as a consequence of human activity both because of replicate contexts for hypothesis testing but also because cities are characterized by an array of easily quantifiable environmental axes of variation and thus testable agents of selection Thanks to a wide possible breadth of inference in terms of taxa that may be studied and a great variety of analytical methods urban evolution has the potential to stand at a fascinating multi disciplinary crossroad enriching the field of evolutionary biology with emergent yet incredibly potent new research themes where the urban habitat is key Urban Evolutionary Biology is an advanced textbook suitable for graduate level students as well as professional researchers studying the genetics evolutionary biology and ecology of urban environments It is also highly relevant to urban ecologists and urban wildlife practitioners **Frontiers in Ecology, Evolution and Complexity** Mariana Benítez,Octavio Miramontes,Alfonso Valiente-Banuet,2014-07-08 Advances in molecular biology remote sensing systems biology bioinformatics non linear science the physics of complex systems and other fields have rendered a great amount of data that remain to be integrated into models and theories that are capable of accounting for the complexity of ecological systems and the evolutionary dynamics of life It is thus necessary to provide a solid basis to discuss and reflect on these and other challenges both at the local and global scales This volume aims to

delineate an integrative and interdisciplinary view that suggests new avenues in research and teaching critically discusses the scope of the diverse methods in the study of complex systems and points at key open questions Finally this book will provide students and specialists with a collection of high quality open access essays that will contribute to integrate Ecology Evolution and Complexity in the context of basic research and in the field of Sustainability Sciences *Dispersal in Plants* Roger Cousens, Calvin Dytham, Richard Law, 2008-03-06 This advanced textbook is the first to explore the consequences of plant dispersal for population and community dynamics spatial patterns and evolution It successfully integrates a rapidly expanding body of theoretical and empirical research The first comprehensive treatment of plant dispersal set within a population framework Examines both the processes and consequence of dispersal Spans the entire range of research from natural history and collection of empirical data to modeling and evolutionary theory Provides a clear and simple explanation of mathematical concepts Integrating Traditional Ecological Knowledge into Ecology, Evolution, and Conservation Thiago Gonçalves-Souza, Rômulo Romeu Nóbrega Alves, Ulysses Paulino Albuquerque, Washington Soares Ferreira Júnior, 2022-10-05

Vegetation Dynamics, Changing Ecosystems and Human Responsibility, 2023-07-26 Vegetation Dynamics Changing Ecosystems and Human Responsibility provides an overview of vegetation dynamics which is the science of natural near natural and human influenced changes in vegetation over time and space We can find chapters about almost every viewpoint of this very diverse segment of our science and in connection with almost every main type of terrestrial ecosystem Sources, Sinks and Sustainability Jianguo Liu, Vanessa Hull, Anita T. Morzillo, John A. Wiens, 2011-06-30 Source sink theories provide a simple yet powerful framework for understanding how the patterns processes and dynamics of ecological systems vary and interact over space and time Integrating multiple research fields including population biology and landscape ecology this book presents the latest advances in source sink theories methods and applications in the conservation and management of natural resources and biodiversity The interdisciplinary team of authors uses detailed case studies innovative field experiments and modeling and comprehensive syntheses to incorporate source sink ideas into research and management and explores how sustainability can be achieved in today's increasingly fragile human dominated ecosystems Providing a comprehensive picture of source sink research as well as tangible applications to real world conservation issues this book is ideal for graduate students researchers natural resource managers and policy makers

The Evolution of Social Behaviour Michael Taborsky, Michael A. Cant, Jan Komdeur, 2021-08-26 How can the stunning diversity of social systems and behaviours seen in nature be explained Drawing on social evolution theory experimental evidence and studies conducted in the field this book outlines the fundamental principles of social evolution underlying this phenomenal richness To succeed in the competition for resources organisms may either race to be quicker than others fight for privileged access or share their efforts and gains The authors show how the ecology and intrinsic attributes of organisms select for each of these strategies and how a handful of straightforward concepts explain the evolution of successful decision

rules in behavioural interactions whether among members of the same or different species With a broad focus ranging from microorganisms to humans this is the first book to provide students and researchers with a comprehensive account of the evolution of sociality by natural selection
