Mechanical Service Operator Question:

Problem Solving for Process Operators and Specialists Joseph M. Bonem, 2011-04-18 This book provides methods to train process operators to solve challenging problems The book is split into two parts The first part consists of two parts first developing a daily monitoring system and second providing a structured 5 step problem solving approach that combines cause and effect problem solving thinking with the formulation of theoretically correct hypotheses The 5 step approach emphasizes the classical problem solving approach defining the sequence of events with the addition of the steps of formulating a theoretically correct working hypothesis providing a means to test the hypothesis and providing a foolproof means to eliminate the problem The initial part of the book focuses on defining the problem that must be solved and obtaining the location time and quantity based specifications of the problem This part of the book also presents techniques to find and define problems at an early point before they progress to the critical level The second part of the book deals with the utilization of fundamental chemical engineering skills to develop a technically correct working hypothesis that is the key to successful problem solving The primary emphasis is on simple pragmatic calculation techniques that are theoretically correct It is believed that any operator can perform these calculations if he is provided the correct prototype Throughout the book the theory behind each pragmatic calculation technique is explained in understandable terms prior to presenting the author's approach These techniques have been developed by the author in 50 years of industrial experience The book includes many sample problems and examples of real world problem solving Using these techniques theoretically correct working hypotheses can be developed in an expedient fashion

Vehicle and Operator Services Agency Great Britain: Parliament: House of Commons: Committee of Public Accounts, 2010-03-11 This report examines the extent to which the Vehicle and Operator Services Agency the Agency is effective in targeting high risk vehicles and whether its approach to enforcement is appropriate for today's world The Agency has successfully increased by over 25 per cent the number of dangerous vehicles and drivers that it removed from the roads in recent years There is scope to do better by bringing the Agency's working practices up to date to reflect current road traffic patterns and the opportunities afforded by technology and working with others More needs to be done to address the significant risk to road safety posed by foreign commercial vehicles They appear to contribute little in the way of revenue and pose a particular challenge in terms of enforcing regulations The Department for Transport and the Agency have not done enough to secure access to HM Revenue and Customs Freight Targeting Database which would allow the Agency to target non compliant vehicles and drivers as they enter the country and so prevent them from travelling on Britain's roads The Agency needs to develop its targeting systems further so that they reflect better the known risks to road safety Likewise the location of staff and checksites needs to reflect more closely current traffic patterns The Department's new Heavy Goods Vehicle HGV compliance strategy is under development and provides an opportunity to make better use of data to analyse risk and to target resources more effectively
