materials and **Advances in Biomedical and Biomimetic Materials** Roger Narayan, P. N. Kumta, W. R. Wagner, 2009-08-19 A collection of articles from the Advances in Biomedical and Biomimetic Materials symposium give insight into advances in biomedical and biomimetic materials. These selected articles cover such topics as scaffolds for tissue engineering, bioceramics, biomimetic materials, nanoparticles for medical diagnosis and treatment, and novel materials for drug delivery and biosensing.

Fluid Interfaces Eduardo Guzmán, 2021-03-02 Fluid interfaces are promising candidates for confining different types of materials, e.g., polymers, surfactants, colloids, and even small molecules, to be used in designing new functional materials with reduced dimensionality. The development of such materials requires a deepening of the physicochemical bases underlying the formation of layers at fluid interfaces, as well as on the characterization of their structures and properties. This is of particular importance because the constraints associated with the assembly of materials at the interface lead to the emergence of equilibrium and features of dynamics in the interfacial systems, which are far removed from those conventionally found in traditional materials. This Special Issue is devoted to studies on the fundamental and applied aspects of fluid interfaces and attempts to provide a comprehensive perspective on the current status of the research field.

Fish and Fishery Products Analysis Saleena Mathew, Maya Raman, Manjusha Kalarikkathara Parameswaran, Dhanya Pulikkottil Rajan, 2019-11-06 This novel and informative book discusses the various aspects of seafood quality. The book is divided into 7 broad sections, each tackling a different aspect. The first section covers the general aspects relevant to the nutritional quality of the fish and the various extraction protocols for macro and micro nutrients. The second section provides insights into handling and the principles of thermal and non-thermal processing techniques for commercially important fishery products. The quality standards and safety concerns in the seafood industry and consumption are discussed in this section. The freshness indices of the processed products, including biochemical, microbiological, and toxicological characteristics, are also included. The third section discusses the physico-chemical characteristics and quality parameters of potable water and ice. The fourth section includes the quality assessment of various toxicants related to seafood products. The fifth section deals with the specific aspects such as principle instrument and procedures of conventional and novel analytical instruments relevant to the seafood industry. The sixth section deals with the seafood waste management, including solid and liquid seafood wastes. Presently, there is a great awareness regarding environmental sustainable processing/preservation techniques. The final chapter discusses the bioactive compounds from under-utilized marine sources, showing pharmaceutical
