Remediation Manual for Contaminated Sites David L. Russell, 2011-10-06 To ask the right question one needs to have some idea of what the answer might be So it is with remediation There is no such thing as too much information when it comes to characterizing a site as information can aid in selecting the best remediation options Unfortunately the collection of data for making an informed decision is often costly    **Remote Sensing Technology in Forensic Investigations** G. Clark Davenport, 2017-06-26 Remote Sensing Technology in Forensic Investigations provides a basic understanding of concepts involved in the use of basic geophysical surveying metal detectors magnetics electromagnetics and ground penetrating radar in police and forensic investigations Such technology can be vital in locating clandestine buried evidence which is often concealed in the subsurface underground Crime scene investigation and evidence collection entails locating identifying collecting and cataloging Such physical evidence searches are time consuming and can often lead to searches that require excavations which in itself that can destroy evidence The noninvasive nondestructive methods outlined in this book can both reduce the time spent on searches and excavations thereby increasing the probability of locating vital physical evidence As such the application of remote sensing methods has gained increased acceptance and seen increased usage by investigators Remote sensing methods are based on making indirect measurements of the surface of and within the earth The resulting measurement information can be presented in either an imaging format such as in aerial photography or a non imaging format such as in a profile or contour map These measurements can be interpreted to identify and characterize contrasts due to differences in physical and natural properties of the materials being studied This can include physical evidence remains and clandestine graves This book will serve as a handy introductory primer to the technology techniques and application of such techniques Throughout numerous references and additional resources are provided for those investigators forensic anthropology and police professionals who want further information on the technology s usage for investigative purposes
