Flat Panel Display Manufacturing Jun Souk, Shinji Morozumi, Fang-Chen Luo, Ion Bita, 2018-09-24 An extensive introduction to the engineering and manufacture of current and next generation flat panel displays This book provides a broad overview of the manufacturing of flat panel displays with a particular emphasis on the display systems at the forefront of the current mobile device revolution It is structured to cover a broad spectrum of topics within the unifying theme of display systems manufacturing An important theme of this book is treating displays as systems which expands the scope beyond the technologies and manufacturing of traditional display panels LCD and OLED to also include key components for mobile device applications such as flexible OLED thin LCD backlights as well as the manufacturing of display module assemblies Flat Panel Display Manufacturing fills an important gap in the current book

literature describing the state of the art in display manufacturing for today's displays and looks to create a reference the development of next generation displays The editorial team brings a broad and deep perspective on flat panel display manufacturing with a global view spanning decades of experience at leading institutions in Japan Korea Taiwan and the USA and including direct pioneering contributions to the development of displays The book includes a total of 24 chapters contributed by experts at leading manufacturing institutions from the global FPD industry in Korea Japan Taiwan Germany Israel and USA Provides an overview of the evolution of display technologies and manufacturing Treats display products as systems with manifold applications expanding the scope beyond traditional display panel manufacturing to key components for mobile devices and TV applications Provides a detailed overview of LCD manufacturing including panel architectures process flows and module manufacturing Provides a detailed overview of OLED manufacturing for both mobile and TV applications including a chapter dedicated to the young field of flexible OLED manufacturing Provides a detailed overview of the key unit processes and corresponding manufacturing equipment including manufacturing test repair of TFT array panels as well as display module inspection repair Introduces key topics in display manufacturing science and engineering including productivity quality factory architectures and green manufacturing Flat Panel Display Manufacturing will appeal to professionals and engineers in R D departments for display related technology development as well as to graduates and Ph D students specializing in LCD OLED other flat panel displays

Flat Panel Displays in Perspective, 1995

The TVs of Tomorrow Benjamin Gross, 2018-03-22 In 1968 a team of scientists and engineers from RCA announced the creation of a new form of electronic display that relied upon an obscure set of materials known as liquid crystals At a time when televisions utilized bulky cathode ray tubes to produce an image these researchers demonstrated how liquid crystals could electronically control the passage of light One day they predicted liquid crystal displays would find a home in clocks calculators and maybe even a television that could hang on the wall Half a century later RCA's dreams have become a reality and liquid crystals are the basis of a multibillion dollar global industry Yet the company responsible for producing the first LCDs was unable to capitalize upon its invention In *The TVs of Tomorrow* Benjamin Gross explains this contradiction by examining the history of flat panel display research at RCA from the perspective of the chemists physicists electrical engineers and technicians at the company's central laboratory in Princeton New Jersey Drawing upon laboratory notebooks internal reports and interviews with key participants Gross reconstructs the development of the LCD and situates it alongside other efforts to create a thin lightweight replacement for the television picture tube He shows how RCA researchers mobilized their technical expertise to secure support for their projects He also highlights the challenges associated with the commercialization of liquid crystals at RCA and Optel the RCA spin off that ultimately manufactured the first LCD wristwatch *The TVs of Tomorrow* is a detailed portrait of American innovation during the Cold War which confirms that success in the electronics industry hinges upon input from both the laboratory and the boardroom

Françoise Pardos,2004 Flexible films are defined as being planar forms of plastics which may be thick enough to be self
supporting but thin enough to be flexed folded and or creased without cracking Films comprise around 25 per cent of all
plastics used worldwide around 40 million tons and are thus a massive market sector Commodity plastics dominate with
polyethylene and polypropylene together accounting for around 34 million tons This is an expanding area with increased
demand each year particularly in the developing regions of the world and with a move from rigid to flexible packaging There
are many material types used in films from single layer polymers to multilayer structures with tie layers and copolymers
Multilayers permit custom adaptation of material properties from barrier to strength Technology such as the orientation of
polypropylene has produced better properties and more valuable materials High performance plastics are also being used in
applications such as teletronics There are details of the main suppliers including mergers and capacity coextrusion casting
extrusion coating extrusion laminating and metallising Blown extrusion was the first process used to make films of
polyethylene These processes have advantages and disadvantages depending on the material type in use the width and
thickness of film required Films are mainly used in packaging for foodstuffs but there are also substantial market segments
for medical electronic automotive and construction applications Specific applications include decorative wrap form fill seal
blood bags flexible printed circuits bed sheeting diapers and in mould decorating of car parts to replace painting and provide
a more durable surface coating Carrier bags and garbage bags are big markets with imports to Europe there are
environmental concerns about the use of plastic bags and these are discussed in the report geomembranes and similar
applications PE and PP are the main materials used in packaging films PET is primarily used in magnetics optics and
teletronics PVC is found in consumer goods and medical applications while PVB is mainly used in automotive and
construction applications as glazing protection Multimaterial films account for around 7 million tons of the films produced
with around 95 per cent of this going into packaging applications These are just some of the examples listed in this market
report Europe and North America each account for about 30 per cent of the total world consumption of plastic films The
plastic films supply structure and individual company information are summarised in the second half of this market report on
