Mathematics and Technology Gilles Aldon,Fernando Hitt,Luciana Bazzini,Uwe Gellert,2017-04-05 This volume collects most recent work on the role of technology in mathematics education It offers fresh insight and understanding of the many ways in which technological resources can improve the teaching and learning of mathematics The first section of the volume focuses on the question how a proposed mathematical task in a technological environment can influence the acquisition of knowledge and what elements are important to retain in the design of mathematical tasks in computing environments The use of white smart boards platforms as Moodle tablets and smartphones have transformed the way we communicate both inside and outside the mathematics classroom Therefore the second section

discussed how to make efficient use of these resources in the classroom and beyond The third section addresses how technology modifies the way information is transmitted and how mathematical education has to take into account the new ways of learning through connected networks as well as new ways of teaching The last section is on the training of teachers in the digital era The editors of this volume have selected papers from the proceedings of the 65th 66th and 67th CIEAEM conference and invited the correspondent authors to contribute to this volume by discussing one of the four important topics The book continues a series of sourcebooks edited by CIEAEM the Commission Internationale pour l'étude et l'amélioration de l'Enseignement des Mathématiques International Commission for the Study and Improvement of Mathematics Education

European Traditions in Didactics of Mathematics Werner Blum, Michèle Artigue, Maria Alessandra Mariotti, Rudolf Sträßer, Marja Van den Heuvel-Panhuizen, 2019-02-18 This open access book discusses several didactic traditions in mathematics education in countries across Europe including France the Netherlands Italy Germany the Czech and Slovakian Republics and the Scandinavian states It shows that while they all share common features both in the practice of learning and teaching at school and in research and development they each have special features due to specific historical and cultural developments The book also presents interesting historical facts about these didactic traditions the theories and examples developed in these countries *Psychological perspectives on expertise* Guillermo Campitelli, Michael H Connors, Merim Bilalić, David Zachary Hambrick, 2015-05-19 Experts are persons who are very knowledgeable about or skillful in a particular area The aim of this Research Topic is to advance knowledge in the understanding of the phenomenon of expertise by putting together different lines of research that directly or indirectly study expertise Herbert Simon's expertise studies initiated two lines of research One is interested in elucidating the cognitive processes underlying expertise and the other investigates how expertise develops These lines of research started with studies comparing experts and novices in chess and then they extended to numerous areas of expertise such as music medical diagnosis sports arts and sciences In the field of judgment and decision making researchers investigate the quality of judgments and decisions of experts in different professions e.g. clinical psychologists medical practitioners judges meteorologists stock brokers Those lines of research

explicitly investigate the topic of expertise but there are other research areas that make a substantial contribution to understanding expertise. Scholars in language acquisition and in face perception for example investigate cognitive processes and development of expertise in areas in which almost everyone becomes an expert. Furthermore skill acquisition research informs in detail about short term cognitive changes that may be important to understand how expertise develops. We are interested in original research that advances knowledge in the understanding of decision making cognitive processes and development of expertise in sports intellectual games arts scientific disciplines and professions as well as expertise in cognitive abilities such as perception memory attention language and imagery. We are also interested in theoretical articles in any of these areas, articles that describe computational or mathematical models of expertise and articles offering a framework that would guide expertise research. Articles that offer integrative approaches of some of the areas described above are strongly encouraged. The goal of this Research Topic is to produce a hallmark piece of work in the field of expertise which complements and does not overlap with the Neural implementations of expertise Research Topic in *Frontiers in Human Neuroscience*.

Changing the Course of Failure Sandra Stotsky, 2018-05-18. The basic purpose of this book is to help policy makers at all levels of government understand that 1) widespread adolescent underachievement is not susceptible to solution by educational interventions no matter how much money is allocated to public education and 2) there are unidentified educational and civic costs to focusing on low achievement and to expecting public institutions of education for K-12 and college to solve a growing social problem. Many policy makers seem to think that teachers/schools are the primary cause of low achievement. Educational institutions still cannot solve a non-education caused problem and haven't done so for over fifty years despite all the public and private money that has been allocated. The book concludes with suggested policies for addressing the damage to public education from gap closing standards and with suggested areas for policy making in order to change the current course of failure for many low achieving students.
