Understanding Student Participation and Choice in Science and Technology Education Ellen Karoline Henriksen, Justin Dillon, Jim Ryder, 2014-09-17 Drawing on data generated by the EU's Interests and Recruitment in Science IRIS project this volume examines the issue of young people's participation in science technology engineering and mathematics education With an especial focus on female participation the chapters offer analysis deploying varied theoretical frameworks including sociology social psychology and gender studies The material also includes reviews of relevant research in science education and summaries of empirical data concerning student choices in STEM disciplines in five European countries Featuring both quantitative and qualitative analyses the book makes a substantial contribution to the developing theoretical agenda in STEM education It augments available empirical data and identifies strategies in policy making that could lead to improved participation and gender balance in STEM disciplines The majority of the chapter authors are IRIS project members with additional chapters written by specially invited contributors The book provides researchers and policy makers alike with a comprehensive and authoritative exploration of the core issues in STEM educational participation

Teaching Science in Secondary Schools Sandra Amos, Richard Boohan, 2013-10-11 A companion to Aspects of Teaching Secondary Science the first section of this reader provides an overview of the key issues discussing the nature of science and its role in the school curriculum The second section goes on to examine critically the ways in which science is reflected in the school curriculum while the third section discusses recent curriculum initiatives and developments Turning the focus from what is taught on to who is taught section four shows that students are very much active learners in the classroom making sense of their experiences and constructing their own meanings The final section covers the role of research in science education giving examples of research papers and considering how productive collaboration between teachers and researchers can impact upon the effectiveness of classroom practice **Introducing CAL** Keith Hudson, 2013-11-11 It is

often the case perhaps more often than not that new ideas arrive long before there is the means to clothe and deliver them. We can think of Leonardo da Vinci's drawings of helicopters and submarines among many other examples. Computer Assisted Learning (CAL) is an example of an idea which has had a particularly long gestation. As I will illustrate early in the book, the principles of CAL were really first discovered by Socrates. As a formal method of teaching, the Socratic method disappeared for over two millennia until the 1950s. It was then revived in the form of Programmed Learning (PL) which resulted from the researches of B. F. Skinner at Harvard University. Even then PL was premature. In the 1950s and 60s methods were devised such as teaching machines and various sorts of PL text books and there was a mushrooming of PL publishing at that time. For a complex of reasons economic, logistical and technical PL also largely disappeared from the mid 60s although it continued in a few specialized areas of teaching and industrial training. However during the same period PL quietly transformed itself into CAL. But the computerized form was not capable of mass dissemination until recently because personal microcomputers did not have sufficient internal memory sizes. That situation has now changed very dramatically and 128K microcomputers are becoming cheap and widely available. Cheap memory chips of 256K and 1024K cannot be far away either.
