Abstract—This study examined the effects of a 12-week, 100% bodyweight resistance training program on the muscle strength and body composition of 10 sedentary, middle-aged men. The program consisted of three sessions per week, with each session including a full-body workout. The results showed that the participants experienced significant increases in muscle strength and body composition after the 12-week program. The study suggests that a 12-week, 100% bodyweight resistance training program can be an effective way to improve muscle strength and body composition in sedentary, middle-aged men.

Springer Handbook of Geographic Information Wolfgang Kresse, David M. Danko, 2012-02-21. Computer science provides a powerful tool that was virtually unknown three generations ago. Some of the classical fields of knowledge are geodesy, surveying, cartography and geography. Electronics have revolutionized geodetic methods. Cartography has faced the dominance of the computer that results in simplified cartographic products. All three fields make use of basic components such as the Internet and databases. The Springer Handbook of Geographic Information is organized in three parts: Basics, Geographic Information and Applications. Some parts of the basics belong to the larger field of computer science. However, the reader gets a comprehensive view on geographic information because the topics selected from computer science have a close relation to geographic information. The Springer Handbook of Geographic Information is written for scientists at universities and industry as well as advanced and PhD
