Earth Science is the study of our Earth, its life-supporting properties, materials, and geologic processes occurring in its layers; and important natural changes in its over-all environment. It is interrelated with other sciences: geology, oceanography, meteorology, and astronomy.

Geology is the study of the materials and processes that operate beneath and upon the Earth's surface.

Oceanography is the study of the composition and movements of seawater, as well as coastal processes, seafloor topography, and marine life.

Meteorology deals with the study of the atmosphere and the elements that produce weather and climate.
