A bacteria has an inner core of either DNA or RNA. Some viruses with RNA, such as HIV, are called retroviruses. The nucleic acid is surrounded by an outer protein coat or capsule, which protects the viral genetic material. Viruses have no cytoplasm and have no membrane bound organelles.

Viruses have the following characteristics:

- Viruses are acellular as they are not complete cells
- Viruses are extremely small and can only be seen using an electron microscope.
- Viruses have many different shapes.
- Viruses do not perform any of the metabolic reactions of living organisms.
- Viruses cannot reproduce unless they invade a host cell.
- Viruses are parasitic on plants, animals, protists and bacteria.
- Viruses have the ability to assemble themselves
- Most viruses are pathogens as they cause disease.

BACTERIA:

Basic structure of bacteria:

Bacteria are unicellular organisms that are classified as prokaryotes. This means they do not contain membrane bound organelles such as nucleus, chloroplast etc. Their DNA floats freely in the cytoplasm. The cell wall is lined with a cell membrane and often covered by a slime capsule to prevent it from drying out. In many pathogenic bacteria the slime capsule also serves as a barrier against phagocytes. Some bacteria have flagella that are used for locomotion. Bacteria also have hollow, hair like structures called pili that are used to attach to other cells.

Bacteria have the following characteristics:

Study Guide for CTET Paper 2 (Class 6 - 8 Teachers) Mathematics/ Science with Past Questions Disha Experts,2020-02-04 iCEER2014-McMaster Digest Mohamed Bakr,Ahmed Elsharabasy,2014-11-18 International Conference on Engineering Education and Research *Morphological Plant Modeling: Unleashing Geometric and Topological Potential within the Plant Sciences* Alexander Bucksch,Dan Chitwood,2017-10-13 An increasing population faces the growing demand for agricultural products and accurate global climate models that account for individual plant morphologies to predict favorable human habitat Both demands are rooted in an improved understanding of the mechanistic origins of plant development Such understanding requires geometric and topological descriptors to characterize the phenotype of plants and its link to genotypes However the current plant phenotyping framework relies on simple length and diameter measurements which fail to capture the exquisite architecture of plants The Research Topic Morphological Plant Modeling Unleashing Geometric and Topological Potential within the Plant Sciences is the result of a workshop held at National Institute for Mathematical and Biological Synthesis NIMBioS in Knoxville Tennessee From 2 4 September 2015 over 40 scientists from mathematics computer science engineering physics and biology came together to set new frontiers in combining plant phenotyping with recent results from shape theory at the interface of geometry and topology In doing so the Research Topic synthesizes the views from multiple disciplines to reveal the potential of new mathematical concepts to analyze and quantify the relationship between morphological plant features As such the Research Topic bundles examples of new mathematical techniques including persistent homology graph theory and shape statistics to tackle questions in crop breeding developmental biology and vegetation modeling The challenge to model plant morphology under field conditions is a central theme of the included papers to address the problems of climate change and food security that require the integration of plant biology and mathematics from geometry and topology research applied to imaging and simulation techniques The introductory white paper written by the workshop participants identifies future directions in research education and policy making to integrate biological and mathematical approaches and to strengthen research at the interface of both disciplines *Bioscience - Lost in Translation?* Richard Barker,2016-09-08 Medical innovation as it stands today is fundamentally unsustainable There is a widening gap between what biomedical research promises and the impact that it is currently achieving in terms of patient benefit and health system improvement This book highlights the global problem of the ineffective translation of bioscience innovation into health system improvements and its consequences analyses the underlying causative factors and provides powerful prescriptions for change to close the gap It contrasts the progress in biomedicine with other areas of scientific and technological endeavour such as information technology in which there are faster and more reliable returns for society The author s career has spanned pharmaceuticals diagnostics and health informatics and he draws lessons from a host of case examples in which bottlenecks have prevented progress such as in

dementia and antibiotic resistant infections and from many in which these barriers have been overcome such as HIV therapy and targeted cancer treatment. The new era of precision medicine holds the greatest promise of closing this innovation gap. Along with techniques such as open innovation and adaptive development, powerful new genomics and digital health tools are poised to transform the productivity of life sciences. Bioscience Lost in Translation lays out a fresh and provocative strategy for advancing the innovation process, shaping the right policy environment and building an ecosystem to deliver the 21st century cures that are urgently needed.

Technologies in Biomedical and Life Sciences Education Harry J. Witchel, Michael W. Lee, 2022-06-24. This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content including media as a learning supplement in comparison to traditional face to face learning. Each chapter includes research on and a broad brush summary of approaches to combining life sciences education with educational technologies. The chapters are organized into four main sections each of which focuses on a key question regarding the consequences of incorporating media into education. In this regard the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity. Further they address the ongoing discussion as to whether students need to be present for lectures and on how having agency in their own learning can improve both retention and conceptual understanding. To link the content to current events the authors also shed light on the impact that the COVID 19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies. Consequently the book offers life science educators valuable guidance on the technologies already available and an outlook on what is yet to come.

Papers in ITJEMAST 11(14) , International Transaction Journal of Engineering Management Applied Sciences Technologies publishes a wide spectrum of research and technical articles as well as reviews, experiments, experiences, modelings, simulations, designs and innovations from engineering sciences, life sciences and related disciplines as well as interdisciplinary, cross disciplinary, multidisciplinary subjects. Original work is required. Article submitted must not be under consideration of other publishers for publications.

Global Issues in Pharmaceutical Marketing Lea Prevel Katsanis, 2015-07-16. *Global Issues in Pharmaceutical Marketing* presents a balanced research based perspective combined with a practical outlook on the current issues faced by the ethical biotech and generic segments of the pharmaceutical industry. It integrates an analytical approach with a global view to examine such issues as market access, digital marketing, emerging markets, branding and more. The book covers not only the North American and Western European markets but focuses on non Western markets such as Latin America and Asia. Each chapter is written as an individual essay about a given issue and where relevant original cases are provided to illustrate how these issues are currently managed by the global industry. This book offers a thoughtful and thorough description of the industry's current situation and integrates the latest scholarly and industry research from different disciplines in one place for convenient reference. It may be used in the following ways: To stimulate class discussions and inspire new streams of research for academics and graduate students. To

introduce the industry to those interested in a career to orient new industry hires or to provide experienced practitioners with current research that will enhance their knowledge To provide an understanding of the industry for those in the healthcare sector such as physicians pharmacists as well as medical and pharmacy students and To present recent and relevant research for those in government public or private payers and public policy environments to facilitate their decision making This book will prove to be a useful resource and an important source of information for academics and their students professionals and policymakers around the world

James A.T. Lancaster,Richard Raiswell,2018-10-24 The motto of the Royal Society Nullius in verba was intended to highlight the members rejection of received knowledge and the new place they afforded direct empirical evidence in their quest for genuine useful knowledge about the world But while many studies have raised questions about the construction reception and authentication of knowledge Evidence in the Age of the New Sciences is the first to examine the problem of evidence at this pivotal moment in European intellectual history What constituted evidence and for whom Where might it be found How

should it be collected and organized What is the relationship between evidence and proof These are crucial questions for what constitutes evidence determines how people interrogate the world and the kind of arguments they make about it In this important new collection Lancaster and Raiswell have assembled twelve studies that capture aspects of the debate over evidence in a variety of intellectual contexts From law and theology to geography medicine and experimental philosophy the chapters highlight the great diversity of approaches to evidence gathering that existed side by side in the sixteenth and seventeenth centuries In this way the volume makes an important addition to the literature on early science and knowledge formation and will be of particular interest to scholars and advanced students in these fields *Look Japan* ,2001
