Crystal Reports .NET Programming Brian Bischof,2004 I wrote this book from the perspective of a programmer wanting to learn how to integrate reports within a NET application I ve been working with Crystal Reports since Visual Basic 3 and it s always been difficult to find technical information on report writing I spent a year and a half researching what NET programmers need to successfully create implement and deploy a Crystal Reports application I even put the book on the internet for everyone to read for free all of last year This generated an incredible number of emails from programmers telling me what they liked disliked and what was missing from the book I learned that there are two distinct types of NET programmers using Crystal Reports The first type of programmer doesn t have much experience with Crystal Reports and

wants a series of tutorials to help them build reports from scratch For this programmer I wrote 13 chapters which teach you everything about adding reports to ASP NET and Windows applications It starts with the basics of building reports to adding charts crosstab reports sorting and grouping subreports and using the formula editor with Basic syntax and Crystal syntax The second type of programmer has been using Crystal Reports for years and is mostly concerned with how to do technical runtime customization of reports For this programmer I researched and diagrammed the undocumented report object models I included dozens of examples in both VB NET and C to show you how to modify reports manipulate different data sources XML ADO NET ODBC OLE DB stored procedures with parameters modify formulas and report parameters and integrate NET with the RAS and RDC The dozens of emails I received when the book was online were instrumental for doing a major revision of many chapters before publishing the book in hardcopy format Since releasing the book I continue to receive more emails from people They regret that the free book isn't online anymore but understand that it couldn't last forever and that the hardcopy version is even better I hope you like it and that it helps you achieve your reporting goals September 2004 Update Due to high demand I did a second printing of the book I took advantage of this opportunity to go through the book and remove all grammatical errors The content is the same but the typos have been corrected *Visual Basic .NET!* Matt Tagliaferri, 2006-02-20 Discover Visual Basic NET Visual Basic NET I Didn't Know You Could Do That will help you conquer the NET learning curve quickly as you make the transition to Microsoft's new programming paradigm Inside you'll find loads of ideas and advice that will teach you the essential aspects of VB NET You'll also find a companion CD loaded with more than 60 ready to run pieces of code that you can implement in your VB NET projects Stop Monkeyin Around and Get Up to Speed on VB NET This book covers all the key changes in the new version of Visual Basic Numerous example projects provide both an excellent teaching aid and a great source library With the tips and tricks in Visual Basic NET I Didn't Know You Could Do That you'll be impressing your fellow VB programmers in no time Go Bananas Become a VB NET Expert Inside you'll learn how to Write smarter code Use new object oriented language features Understand garbage collection Use databases Use VB objects in ASP NET pages Write and Consume XML web services And much more *Pro SQL Server 2012 Reporting Services* Brian McDonald, Shawn McGehee, Rodney Landrum, 2012-09-12 Pro SQL Server 2012 Reporting Services opens the door to delivering customizable web enabled reports across your business at reasonable cost Reporting Services is Microsoft's enterprise level reporting platform It is included with many editions of SQL Server and is something you'll want to take advantage of if you're running SQL Server as your database engine Reporting Services provides a full set of tools with which to create and deploy reports Create interactive reports for business users Define reporting models from which business users can generate their own ad hoc reports Pull data from relational databases from XML and from other sources Present that data to users in tabular and graphical forms and more Reporting Services experts Brian McDonald Rodney Landrum and Shawn McGehee show how to do all this and much more in this third edition of their longstanding book on the
