It coincides with a number of scientific disciplines to address the early human history, habitats of living lives and specimens. This book will be useful to students and researchers as well as to earth scientists, archaeologists, biologists, natural scientists and other experts in a number of related disciplines. The volume consists of three sections sorted thematically, each focusing on a certain aspect. The book presents results on the determination and definition of caves discussed by means of geographic, geophysical and geological applications. Geomorphometric analysis using GIS and laser scanning, the importance of electric tomography method in cave detection, the use of groundwater sources in agricultural areas and the habitats of bats and species are studied on several cave studies.
